Users are advised to carefully review this section to avoid potential hazards to persons, this product and other products connected to it.

- To protect the instrument and the Device under Test (DUT), grounding is required during signal acquisition.
- Follow the "Operating environment" recommendations from Table 2:1.
- Protect the LAP-F1 from static discharge.
- Avoid direct impacts and rough handling.
- The LAP-F1 is an IEC 61010-1 Level 2 instrument. The relevant pollution caution is: "Normally only non-conductive pollution occurs. But temporary conductivity caused by the occasional condensation must be kept in mind."
- Do not place heavy objects on the LAP-F1.
- As a Class A product, the LAP-F1 may cause radio interference in a domestic environment.
- Do not disassemble the LAP-F1 as this will void the warranty and may affect its operation.

1. Introduction

1.1. Preface

This User Guide presents the Zeroplus* LAP-F1 logic analyzer, its operation and software. The purpose of the User Guide is to help users understand and get familiar with the operations of the instrument and the software. Throughout the document, the instrument software is referred to as ZP-Logic and the instruments as LAP-F1.

Zeroplus attaches great importance to users' suggestions. Users are welcome to give us feedback by email or telephone. Thank you for purchasing the LAP-F1 logic analyzer.

* Zeroplus is short for Zeroplus Technology Co., Ltd.

1.2. About this document

This User Guide is organized as follows: First, the characteristics of the LAP-F1 are presented, followed by installation and setup procedures. The next section familiarizes the user with the software user interface. Section 4 then goes in-depth on the software functions.

- **NOTE** The software functions in chapter 4 are sorted by their locations on the ZP-Logic Main Menu.
- **NOTE** The latest version of this document can be downloaded from the Zeroplus website.
- **NOTE** Right-click menus are found under the corresponding view modes in chapters 4.48.1 and 4.48.2.
- **NOTE** The newest software UI might differ from the illustrations herein.

1.3. Product Introduction

The LAP-F1 is a multi-purpose PC-based logic analyzer. It offers uncompromised breadth in one single instrument: high sample rate, large channel count and deep memory.

But the LAP-F1 is not only about GHz and Mb. The extensive protocol library consisting of more than 120 protocol decoders, direct streaming to disk, channel folding, eMMC decoding capability, user-friendly software and a host of other functions make debugging a joy. All of these functions are described in chapter 4.

1.4. Package Content

All items contained in the LAP-F1 package are listed in Table 1:1. If any of the items is missing or damaged, please contact your distributor as soon as possible.

Item	LAP-F1	LAP-F1	Detail
Channels	40 ch.	64 ch.	
Logic analyzer	1	1	
CD w/ driver, software and manual	1	1	
Low Voltage Probe	20	32	P120LV
Clock In probe	1	1	P300ST Type E
Signal/ground cable pair	40	64	9.6cm
Clip-on connector	80	128	
USB 3.0 cable; PC-to-LAP-F1	1	1	A to B type; 1.5 m
Power cord	1	1	1.8 m
Power cable	1	1	9 V
BNC cable	1	1	1 m

Table 1:1 LAP	-F1 package	content
---------------	-------------	---------

1.5. System Requirements

1.5.1. Operating System Requirement

The LAP-F1 supports operating systems from Microsoft only. See Table 1:2 below for a list of supported operating systems. Please contact our Technical Support team if you have questions about older operating systems.

Supported OS	Versions	
Windows 10	32- and 64-bit	(Recommended)
Windows 8.1	32- and 64-bit	(Recommended)
Windows 7	32- and 64-bit	

Table 1:2 Supported operating systems

Item	Value	Туре	
СРИ	2 GHz	Minimum	
Memory			
RAM	2 GB	Minimum	
RAM	4 GB	Recommended	
Hard disk	80 GB	Minimum	
Interface			
	USB 3.0	Recommended support	
	USB 2.0	Recommended compatibility	
Display			
Display size	17"	Recommended	
Display resolution	1,024 x 768	Minimum	
Display card	8 Mb SDRAM	Recommended	

1.5.2. Hardware Requirements

Table 1:3 PC hardware requirements and recommendations

1.6. Product Specifications

1.6.1. Product Photo

Figure 1-1 Top view of the LAP-F1

1.6.2. Specifications

Item	Characteristic
Supported operating systems	See Table 1:2
Acquisition Channels	40 or 64
Interface	USB 3.0 (2.0 compatible)
Sampling Frequency	
Internal (Timing)	1 GHz
External (State)	200 MHz (Dual-edge)
Memory/channel	4, 8, 16, 32, 64, 128, 256, 512Mb,1G
Trigger	
Trigger Channels	40 or 64
Trigger Events	Pattern / Edge / Pulse-width / Interval (Time)
Trigger Delay	Yes
Trigger Sequence Levels	256
Trigger Pass	1-65,535
Trigger Voltage	4 simultaneous levels; 1 for each of the 4 ports

Auxiliary Cursors	250
Protocol Triggers (HW)	I2C, I2S, SPI, SVID, UART, CAN2.0B
eMMC trigger	4 channels only; see Special functions below for full
	support
Software functions	
Languages	English, Chinese (Traditional), Chinese (Simplified)
Zooming & Panning	Two cursor modes
Wavefrom & UI	Modify the appearance of channels, menus, traces,
customization	windows etc
State List & Waveform View	Present the samples as a list of 1s and 0s or as a
	waveform
DSO Connection	Connect to and import signals from DSOs
Files Comparison	Compare 2 files to quickly see where and how they differ
Navigator	Instantly navigate to distant parts of the waveform
Memory View	See what the memory looks like; what is read/written to
	each address
Packet List	Breakdown of all packets in list form
Statistics	Table view of number of periods, periods that satisfy
	conditions etc
Find Results	Set conditions, look up the information meets the
	requirements
eMMC Decoder	Decode 4 eMMC signals for free
Real-time Signal Activity	Live view of probe activity
Protocol Decoders	More than 120 free, built-in protocol decoders
Miscellaneous	
Phase Errors	< 3 ns
Power	AC (IN): 100-240 V 50/60 Hz; DC (OUT): 9 V / 5.55 A
Dimensions	322 x 180 x 38 mm
Special Functions (Optional)	See chapter 1.6.4.
Certifications	CE and FCC

Table 1:4 LAP-F1 specifications

1.6.3. Available Models

Model	Channels	Memory depths available
LAP-F1	40	4, 8, 16, 32, 64 ,128,256,512Mb and 1G /channel
LAP-F1	64	4, 8, 16, 32, 64 ,128,256,512Mb and 1G /channel

Table 1:5 Available memory depths

1.6.4. Optional Features

Table 1:6 lists the optional features; see chapters 4.41, 4.44 and 4.45.

Feature	Description
Channel Folding	LAP-F1 offers the ability to concentrate the total memory on a limited
	number of channels. Ex: The 40 channels model with 4 Mb/ch. has 8
	Mb available if only 16 channels are active; 16 Mb for 8 channels etc;
	see chapter 4.45 for details.
eMMC 5.1 / SD	Get the special eMMC probes and unlock 32 channels at for 2 GHz $$
3.0	sampling to fully trigger and decode all the signals of eMMC5.1/SD3.0;
	see chapter 4.41 for details.
Long-Time	This function is used to stream samples directly to disk. The speed
Record	can reach 300MB/s using USB 3.0. The Long-Time Record function
	can be used to acquire signals for 7 hours to 35 days depending on the
	acquisition setup and available storage; see chapter 4.44 for details.

Table 1:6 Optional features

1.6.5. Electrical Specifications

Item	Minimum	Normal	Maximum
Phase error	0.2 ns	-	3 ns
Working Voltage (DC)	-	9 V	-
Standby Current	-	-	1.9 A
Working Current	-	-	2.0 A
Standby Power	-	-	17 W
Working Power	-	-	18 W

Table 1:7 LAP-F1 electrical specifications

The LAP-F1 comes with Low Voltage probes; one per channel. Included in the standard purchase.

1 additional probe types are available for sale: eMMC/SD probes. These are presented in Table 1:8 and Table 1:9.

Item	Description
Code	P120LV (Low Voltage)
Incl. in base purchase	32 incl.
Signal Type	Single-ended
One Probe Channels	2
Channels (Max)	64
Input Impedance	190 kohm ±10%
Capacitance	4.3 pF ±2 pF
DUT Bandwidth (Max)	120 MHz
Transm. Rate (Max)	120 Mbit/s
Trigger Level	User-defined
Trigger Level Range	V _{IH} : 0.6 to 5 V
Input Signal	0V to 5V
Input DC V (Max)	±10 V

Table 1:8 LAP-F1 low-voltage probe specifications

The following probes are also available for the LAP-F1.

Item	eMMC/SD				
Code	P300ST (Type A/B/C/D)				
Incl. in base purchase	No				
Signal Type	Single-ended				
One Probe Channel	1				
Channels (Max)	32				
Input Impedance	190 kohm ±10%				
Capacitance	4.3 pF ±2 pF				
DUT Bandwidth (Max)	200 MHz				
Transm. Rate (Max)	400 Mbit/s				

Table 1:9 LAP-F1 special purpose probes specifications

- **NOTE** Voltages that exceed the Input DC level can damage the probes.
- **NOTE** P300ST Type E spec same as table 1.9.

1.6.7. Port Overview

Figure 1-2 shows the ports of the LAP-F1.

Figure 1-2 Rear view of the LAP-F1

Port	Number	Description					
Signal	32	USB connections to probes for signal acquisition.					
Channels							
CLK IN	1	External clock input for State mode acquisitions; see chapter					
		4.17					
STACK	1	Stack multiple instruments to increase channel count; not					
		currently available.					
TRIG. OUT	1	Connect to DSO for external triggering; see chapter 4.17.2.2.					
USB	1	Connection to the PC; both USB 3.0 and 2.0 are supported.					
CLK OUT	1	LAP-F1 clock output.					
DC	1	External power supply; see chapters 1.6.5 and 2.2.					

Table 1:10 LAP-F1 input ports

In Figure 1-3, cables are connected to the LAP-F1 ports listed above. Some of the 32 signal channel ports are seen in the left part of the picture.

Figure 1-3 Cable connections to the LAP-F1

2. Installation and Setup

2.1. Software Installation

NOTE For users who have internet access, we recommend that you download the latest version of the ZP-Logic software from our website: <u>www.zeroplus.com.tw</u>.

Close all other programs and connect the LAP-F1 to the PC via USB. Open the set.exe file manually. The dialog box from Figure 2-1 will be shown.

Figure 2-1 Main installation window

Choose the Application Setup as this option will install both the software and the instrument driver. The Driver Setup is for driver reinstallation.

Before the installation starts you will be asked to read the License Agreement carefully. "I accept the terms of the license agreement" must be checked to continue.

Clicking "Next" throughout the installation to install the standard version is recommended, but options for customizing the installation are also available for users who want that. Upon completion, the user will be prompted to restart the computer; it is recommended to do so.

When the ZP-Logic is launched for the first time, a Find New Hardware dialog box will appear and the driver will then be installed automatically.

Once the ZP-Logic and the driver installations have finished the LAP-F1 and the ZP-Logic are ready for use.

2.2. Hardware Setup

Please prepare the probes. Connect the USB cables with the probes as shown in Figure 2-2.

Figure 2-2 USB connection to the TTL probes

Proceed to connect the USB cables to the instrument; see Figure 2-3.

Figure 2-3 Test cables connected to the LAP-F1

Connect the LAP-F1 to the PC using the USB, then power up the instrument to ensure that it's working. Connect the AC power cord to the transformer and the DC cable to DC plug of the LAP-F1. The power lamp indicated in Figure 2-4 turns on when the power is connected.

Figure 2-4 Signal cable connection and power lamp location

2.3. Connection to DUT

The LAP-F1 comes with two flying lead type of probes included: one low-voltage probes per channel and four eMMC probes. All of the probe types are active, i.e. they are not merely pieces of wire but have active components in the probe head that amplify, filter, isolate and in other ways improve the signal quality. These characteristics make the probes well-suited for high-speed signal measurements.

Each active probe provides two channels and consists of four cables: two signal cables and two ground cables that all have Dupont pods on the ends; see Figure 2-5.

Note that each port on the LAP-F1 carries to signals; the probes connected to port A0 will show as traces A0 and A1 in the software and so on. Each probe has 0 and 1 marks at the front end; mark 0 corresponds to the lower numbered channel, and mark 1 corresponds to the higher numbered channel. Ex: If a probe is connected to the 4th D-port, then probe mark 0 will be shown on channel D6 in the software and mark 1 on channel D7. See the port names on Figure 2-4.

Figure 2-5 Connection to DUT

- **NOTE** Each USB cable from the probe to the LAP-F1 carries <u>two</u> signals. The two signals are completely independent.
- **NOTE** There is one ground cable per signal cable (to have short ground leads).
- **NOTE** The signal cables are eight color types and the ground cables are black.
- **NOTE** Each signal-ground pair of cables is glued in one end and flies in the other. If the ground pins are not conveniently positioned on the DUT, it is possible to turn the cable pairs around so that the ground pins can be left hanging.
- **NOTE** The supplied probes are numbered and colored since this can help eliminate confusion. However, all probes of one type are electrically identical so it is not necessary to follow the numbering.
- **NOTE** There is a second way to find out which of the signal cables will correspond to the lowest-numbered channel of the port: Look at the probe from the

USB connection side of the PCB; the lowest numbered channel will be the left one.

- **NOTE** If the probes do not connect well to the DUT pins, users can try to use the supplied clip-on (grip) connectors. Connect the signal lead to the clip-on pin then, compress the clip-on to reveal two metal prongs that can be hooked onto the contact points.
- **NOTE** To avoid large attenuation, the cable length between signal pad and the DUT should not exceed 3 cm. This is achieved with the provided probes.

2.4. Trigger In/Out

The LAP-F1 can be connected to a DSO (or another instrument) for external or internal triggering.

NOTE It is also possible to display the analog waveform of a connected DSO in ZP-Logic. This is described in chapter 0.

2.4.1. Trigger In

The LAP-F1 can be triggered by an external source, most commonly a DSO or another logic analyzer. The external trigger should then be connected to the STACK port of the LAP-F1 and the External Trigger checkbox in the Trigger Setup must be selected.

2.4.2. Trigger Out

When the trigger conditions have been met the LAP-F1 can emit a signal that can be used to trigger another instrument. This signal can be sent on the occurrence of three different events. The signal is sent from the BNC port.

To trigger out, the "Send output signal upon triggering" must be checked in the Trigger Options dialog box (Figure 4-37) .

2.5. Operating Environment and Maintenance

Please follow the below instructions when using, cleaning or storing your LAP-F1 and probes. Please also see the Precautions chapter prior to the Introduction.

Type Description

Cleaning

Clean with a soft, damp cloth using a mild detergent.

Do not spray any liquid on the LAP-F1.

Do not immerse the LAP-F1 in any liquid.

Do not use harsh chemicals or cleaners containing substances such as benzene, toluene, xylene or acetone.

Operating environment

Operating environment						
Temperature (Working)	Min: 5° C	Max: 35° C				
Temperature (Storage)	Min: -20° C	Max: 60° C				
Rel. humidity (Working)	Min: 20%	Max: 85%				
Rel. humidity (Storage)	-	Max: 90%				
Altitude	-	Max: 2,000 m				
Insolation	Avoid direct sunlig	ght.				
Environment	Use in a dust free, non-conductive environment.					

Table 2:1 General advices for cleaning, operation and storage

3. User Interface

The ZP-Logic user interface is shown in Figure 3-1.

Figure 3-1 ZP-Logic user interface

The ZP-Logic window can be divided into sections; see Table 3:1. Note that many functions can be accessed with Hot Key combinations.

Name	Area	Description			
Main Menu	А	All operations can be accessed from the Main Menu bar. The			
		organization of chapter 4 corresponds to that of the Main			
		Menu; see chapter 4 for details.			
Quick Access	В	The Quick Access Toolbar provides convenient access to			
Toolbar		frequently used functions; see chapter 4.11.3 for details.			
File Bar	С	The File Bar consists of File Page, Memory Page and Show All.			
		The File Page displays the new added files. File Page can be			
		minimized, restored and closed.			
Timing Bar	D	Facilitates quick reading of the samples and traces; see 4:55 for			

		details.				
Channel Column	Е	See and edit channels; see Figure 4-74 for details.				
Trigger Column	F	Set trigger conditions; Figure 4-76 for details.				
Waveform Area	G	Displays the captured signals as traces or as a numeric list; see				
		chapter 4.48 for details.				
Control Panel	Н	The Control Panel gives quick access to acquisition settings; see				
		chapter 4.51 for details.				
Secondary	Ι	Area where the Navigator, Packet List, Statistics, Memory View,				
Display		LTR Monitor are shown and Find Results; see chapters 4.52,				
		4.53, 4.54, 4.55, 4.56 and 4.56.				
Action Wheel	J	The Action Wheel provides shortcuts to functions related to				
		acquisition and searching: see Figure 4-84 for more details.				

Table 3:1 UI description; "Area" refers to the letter codes on the figure above

NOTE The Control Panel and the Secondary Display can be repositioned or hidden. Right-click to bring up the menu from Figure 3-2.

Figure 3-2 Reposition/hide sector; right-click menu

Item	Description
Floating	Move the Control Panel/Secondary Window freely; see Figure 3-3 for an
	example.
Docking	Fix the Control Panel/Secondary Window to its position.
Autohide	The control panel hides in the right edge, users could move the cursor to
	the icon of "Control Panel" to show it.
Hide	Don't show the Control Panel/Secondary Window; use the View menu to
	have it appear again.

Table 3:2 Reposition/hide sector; right-click menu description

Figure 3-3 shows an example where the Control Panel is "floating"; if the user un-clicks the mouse when hovering over one of the arrows the Panel will be

repositioned to the corresponding transparent/blue area (in the example the user is holding the mouse over the upward arrow).

4. Software Operations

This chapter follows the ZP-Logic Main Menu organization. Each section starts off by showing the corresponding drop-down menu from the Main Menu. The functions are presented one by one in the succeeding subchapters.

NOTE ZP-Logic will automatically check online for updates upon startup.

File

Press ALT + F to open this Main Menu item with the keyboard.

4.1. Menu Layout

New	Ctrl+N							
Open	Ctrl+0							
Close	Ctrl+F4							
Save	Ctrl+S							
Save As								
Export	•							
Screen Capture								
Print	Ctrl+P							
Print Preview	Ctrl+Alt+I							
Options								
Recent File	Recent File							
Exit								

Figure 4-1 File drop-down menu

4.2. New

Create a new, empty file.

Hot Key: CTRL + N.

4.3. Open

Open an existing file. When selecting a file in the Open file dialog box, file information such as author name, creation date, project title will be shown in the lower part of the dialog box. Some of this information is user-added to the file when saving; the rest is automatically added by ZP-Logic.

Hot Key: CTRL + O.

4.4. Close

Close the active file. When closing a file that has previously not been saved, ZP-Logic prompts the users to save it before closing.

Hot Key: CTRL + F4.

4.5. Save

Save the active file. If the file has not been saved before, the Save As dialog box will open; see chapter 4.6.

Hot Key: CTRL + S.

4.6. Save As

Save As is useful for users who wish to save a file under a different name or type or change the destination folder. The Save As dialog box also opens when the user saves a file for the first time so that these parameters can be defined.

The Save As dialog box lets users input file information such as author name and a note. This information is used for previews in the Open file dialog box; see chapter 4.3.

In the Store Settings the user can chose which section of the data to store; this can be particularly useful for long acquisitions with a limited amount of interesting data.

- **NOTE** Acquisitions are stored as temporary files that are instantly available to the user for most software functions. These temporary acquisition files need to be processed before they can be saved.
- **NOTE** Since file processing slows down the software, users can choose not to process the temporary acquisition files automatically. If chosen, users who try to save a file (or initiate certain other functions) will be informed that the acquired data needs to be processed to proceed. This setting is accessed under General in the Options dialog box as "Automatically process acquired data (NB: Slower)".

4.7. Export

Users can choose between three types of exports: Waveform, Packet List or Memory View. The characteristics of each type are presented below.

4.7.1. Waveform

This chapter treats the export of waveforms; please refer to chapter 4.48.1 for more details on the Waveform View itself. The Export Waveform dialog box is shown in Figure 4-2.

Figure 4-2 Export Waveform dialog box

Item	Description
File name	Input the file name; the default is Wave.
Save as type	Save the file as .txt or .csv; the default is .txt.
Include environment	Include acquisition parameters etc. in the export file; checked
info	by default.
Arrange Output Data	
By channel/bus	Each column in the export file contains data for one channel;

	default option.
By Timestamp	Each column in the export file contains data for one
	timestamp.
Data to Export	
All channels and buses	Export channel, bus and protocol decoder data.
All buses (excl. channels)	Export bus and protocol decoder data.
Buses with PD (incl.	Export protocol decoder data (channel data included).
channels)	
Buses with PD (excl.	Export protocol decoder data (channel data not included).
channels)	
Data Selection	
All Data	Export all data.
Show changes in state	Export data for timestamp X only if at least one signal has
only	changed state from timestamp X-1 to timestamp X.
Show changes in data	Export data for timestamp X only if at least one data has
only	changed state from timestamp X-1 to timestamp X (for buses
	only).
Bus Selection	Select buses to be included in the export file.
Range	
From, To	Select the range for the data to be exported; the measure for
	the range is time.
Limit the number of lines	Limit the size of exported files; if there are data don't fit on the
per export file	amount of lines selected by the user then multiple files will be
	created.
Open file automatically	Open the exported file once it is ready; activated by default.
after exporting	
Use tabs to separate data	When selected, blank spaces in the export file are replaced by
(Faster)	tabs; this increases the writing by up to 50%; selected by
	default.
Table 4.1	Expert Wayoform dialog hav description

Table 4:1 Export Waveform dialog box description

NOTE To export a waveform, the temporary acquisition file must be processed; see note in chapter 4.6 for details.

4.7.2. Packet List

This chapter treats the export of Packet Lists; please refer to chapter 4.54 for more details on the Packet List function itself. The Export Packet List dialog box is shown in Figure 4-3.

zeros Open file after exporting Open the exported file once it is ready; selected by default.

Table 4:3 Export Memory View dialog box description

4.8. Screen Capture

Select a part of the screen – or all of it – and store it as a file or a picture; see the dialog box in figure 4-6. If Clipboard is selected the file will be stored in the RAM. Some level of customization is possible as described in Table 4:4.

🙆 Screen Capture	×
Capture to Note: File Clipboard Ms Paint Capture Region Full Screen Select Region 	4
Select Line Color	Contrasting Colors
Capture	Cancel

Figure 4-6 Screen capture dialog box

Item	Description
Capture to	
File	Save the captured region in .bmp or .jpeg format.
Clipboard	Copy the captured region to the clipboard for editing in other software.
MS Paint	Open the captured region in MS Paint.
Capture Region	L Contraction of the second
Full Screen	Capture the full screen.
Select Region	Select a part of the screen to be captured by dragging a square with the

	left mouse button.
Note	Users can enter text to accompany the screen capture; if the field is not
	empty a blank area will be added below the screen capture where the
	text will be displayed.
Note Color	Change the color of the Note text.
Line Color	Change the color of the Select Region frame; by default this is black.
Invert Colors	The Select Region frame color is the opposite of Line Color; selected by
	default.

Table 4:4 Screen capture dialog box description

4.9. Print

The print function works on the part of the waveform or state list that is viewed at the moment of printing. The Timing Bar (above the waveform) and the Channel Column with the trigger conditions is also printed. The Waveform/State List background is printed as white and an extra field containing the file name, date and page number is added to the top of the page.

The print option dialog box has a standard layout that lets the user choose what to print and also gives access to other printer properties; see figure 4-7.

Hot Key: CTRL + P.

Figure 4-7 Print Setup dialog box

Item	Description
Name	Select a printer.
Properties	Open the Print Properties dialog box for more print options.
Print range	
All	Print the entire waveform or state list.
Pages	Print parts of the waveform or state list. What is currently being
	viewed is regarded as one page.
Current Page	Print the current view.
Copies	
Number of copies	Number of copies to be printed.
Collate	Organization of multiple copies. Ex: 2 copies of 3 pages will print
	1, 2, 3, 1, 2, 3 when collate is checked (default option) and 1, 1, 2,
	2, 3, 3 when unchecked.

Table 4:5 Print Setup dialog box description

4.10. Print Preview

Preview what the printed file will look like. When opening the Print Preview, a new toolbar will appear above the preview; this is used for zooming and navigation between pages. Press Esc to leave the Print Preview.

Hot Key: Press CTRL + ALT + I.

4.11. Options

The appearance and behavior of the user interface and functions can be customized. Configurations, options and settings are gathered under this menu item.

Options	? ×
General Start-up Quick Access Toolbar Color Settings Waveform Hot Keys Save Options	Select Language Chinese (Simplified) Other Chinese (Traditional) English
	Post Capture Options When pressing Stop during sampling: Image: Show previous acquisition Image: Show pr
	Packet Names Gridlines Image: Size Image: Size Image: Size Image: Size
	OK Cancel Default

4.11.1. General

Item	Description
Select Language	Choose between English, Chinese (Simplified) and Chinese
	(Traditional); the one selected during installation is the default.
	The <i>More</i> option is used by customers who have developed a
	proprietary language pack.
Post Capture Options	
Show previous	This option governs the software behavior when the user presses

LAP-F1 Logic Analyzer | User Guide v2.4 | www.zeroplus.com.tw

acquisition	Stop in the middle of an acquisition. If this option is selected then	
	the previous acquisition will be displayed again.	
Show newly acquired	d When pressing Stop during an acquisition, the data acquired up	
data	until the Stop moment is displayed; this is the default option.	
Automatically process	Process the data upon finalizing acquisitions; if unchecked the	
acquired data (NB:	ZP-Logic will prompt the user to process data when launching	
Slower)	certain functions. See a more detailed explanation in chapter	
	4.6.The function is turned on by default.	
Temp	Location of temporary acquisition files.	
Gridlines	Show vertical gridlines in the waveform area; unchecked by	
	default.	
Packet Name		
Full names	Display the full names of packets; this is the default option.	
Abbreviations	Display packet names abbreviated to a single letter: Data is	
	shown as D etc. This option lets users see the packet type for	
	short packets where the full name would otherwise not be shown	
	due to space limitations (which is a combination of packet size	
	and zoom level).	
Keyboard	Open an on-screen keyboard when inputting numbers. The	
	on-screen keyboard is operated with the mouse; by default it is	
	not shown.	
PageSize	PageSize relates to our <i>Memory Page</i> feature. To speed up the	
	loading of waveforms, large acquisitions are divided into <i>pages</i> .	
	The PageSize determines the size of these pages. Ex: A 16 Mb	
	acquisition will be split into 8 pages if the PageSize is set to 2 Mb.	
	$1\frac{1}{2}$ pages are displayed at a time and the user moves between	
	pages by means of the File Bar; see Figure 3-1 for the location of	
	this. It is also possible to navigate between pages using the Go To	
	function; see chapter 4.31.

	hovering over a trace in the waveform view; selected by		
	default.		

4.11.3. Quick Access Toolbar

The Quick Access Toolbar consists of shortcut icons to commonly used functions. It is located below the Main Menu and is shown by default. Table 4:9 lists all functions that can be placed on the Quick Access Toolbar.

Users can customize the Quick Access toolbar by organizing the icons into groups. ZP-Logic comes with pre-defined groups; a Standard group and one group for each of the Main Menu items. The Standard group consists of a selection of common functions; the second type provides shortcut icons to all the functions under a Main menu item. Users can modify the Quick Access Toolbar in three ways:

- By selecting the group or groups that are displayed
- By adding or removing items from the pre-defined groups
- By creating a custom group

These modifications are done from the Quick Access Toolbar dialog box shown in figure 4-10.

Options		? ×

4.11.4. Colors

Users can customize the colors of bars, texts, traces and other elements of the user interface. To change the color of an element, click the corresponding color bar in the Color column of the dialog box shown in figure 4-11 to access the color palette. Proceed to select a predefined color or define a custom color for the element.

Figure 4-15 Acquisition drop-down menu

4.14. Add Channel

To add one or several channels, select the channels to be included and bring them over to the right column using the arrow. The CTRL and SHIFT keys can be used to mark several channels at the same time. Using the lower arrows channels can also be removed. To finalize the inclusion of new channels the user must choose whether he wants all other channels to be deleted or not. The select channels dialog box is shown in figure 4-16 where four channels have been added.

Figure 4-16 Add Channel dialog box

4.15. Add Bus

Adding a bus follows the same routine as adding a channel (chapter 4.14), but the dialog box differs slightly; see Figure 4-17. First, it links to the Advanced Settings dialog box; see Figure 4-18. Second, the right-most column indicates which is the most significant bit and which is the least. Show caution to ensure that channels are added in the correct sequence; the first channel added will become the LSB and the final addition will be the MSB.

Hot Key: CTRL + B.

(Channel and	The Chip Select function emulates a real chip select. The function is	
Level)	similar to the Latch function (below) in that it decodes bus data, but it	
	only does so when all the conditions are met.	
Latch Settings		
(Channel and	The Latch function is used to analyze/decode bus activity that does not	
Event)	use a specific protocol (referred to simply as a Bus in ZP-Logic). When	
	selecting a channel and an event (for instance A0 and Falling Edge), the	
	bus data will be decoded and displayed at every occurrence of this	
	event.	
Packet Setting		
Packet Interval	Set the Interval time of Packets for buses. Unchanged bus signals that	
	meet the Interval time value are decoded as a packet. Eg: Set 8 ms as	
	Interval time, if the unchanged signal exceeds 8ms the signal would be	

resolved to one 8 ms packet.

Table 4:14 Add Bus / Advanced Settings dialog box description

4.16. Add Protocol Decoder

Select the desired Protocol Decoder from the dialog box shown in Figure 4-19. The protocol decoders are arranged by industry in a list where each section can be collapsed/expanded using the minus/plus symbol to the left of the protocol decoder names. The right part of the dialog box shows a brief description of the selected protocol decoder.

Add Protocol Decoder	? ×
Selection Protocol Decoder (Total:129) Image: Selection Proto	
Back Next	Cancel

NOTE Right-click on a decoder to add it to the topmost Favorites list.

Figure 4-19 Add Protocol Decoder dialog box

The ZP-Logic comes with more than 120 free protocol decoders; these are listed in Table 4:15. The protocol decoders are individual modules that are separated from the ZP-Logic software.

The protocol decoder dialog box shown in figure 4-20 is an example that shows the I2C decoder setup. Note that all protocol decoder dialog boxes have distinct designs.

4.17. Acquisition Setup

Acquisition/Trigger Setup choices such as channel assignment, Sampling mode and the Trigger Setup dialog box. This is also where users can adjust the voltage threshold for triggering and configure a DSO connection.

4.17.1. Bus/Signal

Figure 4-21 Bus/Signal Setup dialog box

Item	Description
Bus/Signal	One probe is connected to each of the channel ports of the LAP-F1
	and each probe samples one signal. By default, Port A0 (Probe0) is
	linked with channel A0 in the software etc. Channels can be renamed
	and rearranged: The left column shows the channel name in
	ZP-Logic and the purple coloring determines which of the
	ports/probes is linked to the channel.
Add Signal	Add a channel. The user must define which probe the new channel
	should be linked to; by default it's unassigned.
Delete Signal	Delete the selected channel.
Delete All	Delete all channels.

Figure 4-22 Sampling Setup dialog box

Item	Description
Acquisition Mode	
State (External	In State mode (also called synchronous acquisition) the clock that
Clock)	governs when to sample data is provided by the DUT. State mode
	provides a view of how the system is executing. One sample is taken
	per clock cycle and the user must specify whether he wants to
	sample on rising or falling DUT clocks, or on either. The State mode
	sample rate goes from 0.001 Hz to 200 MHz.
Timing (Internal	In Timing mode (also called asynchronous acquisition) the input
Clock)	signals are sampled and stored at equal time intervals based on
	LAP-F1's internal clock. The Timing mode sample rate goes from 5
	MHz to 1 GHz.
Acquisition Choice	S
Sample Depth	Determine the amount of data to be acquired per channel; it is set to
	32 k by default.
Sample Rate	The sample rate or acquisition frequency determines how often
	samples are taken. Press $CTRL + U$ to increase the sample rate and
	CTRL + D to decrease it.
Trigger Level	See chapter 4.21.
DSO Connection	Set up a DSO Connection; see chapter 4.37.

Table 4:17 Sampling Setup dialog box description

4.17.2.1.Trigger Level

The Trigger Level defines when a signal changes state. In other words; if the voltage of a signal is inferior to the Trigger Level it will be regarded as 0 (Low), and vice versa. Similarly, when the signal voltage rises from below to above the Trigger Level, the LAP-F1 will consider that a change of state from Low to High has occurred and that the new state is 1 (High). The Trigger Level is sometimes referred to as Trigger Voltage or Threshold Level.

The LAP-F1 lets users use up to 4 different Trigger Levels at a time; one for each of the four port A, B, C and D. For each port, three pre-defined levels are available: 1.2/1.5/1.8 IO voltages. It is also possible to user-define the Trigger Level. See the dialog box in figure 4-23.

Trigger Level						2	×
- Trigger Leve	el						
Port	Probe Type	ІО Туре		Thresho	ld		
Port A	P120LV V	1.8V CMOS 🔹	Min:0.6V	· · · · · · · · · · · · ·	Max:1.6V	0.900	(V)
Port B	P120LV -	1.8V CMOS 🔻	Min:0.6V	· · · · · · · · · · · · · · · · · · ·	Max:1.6V	0.900	(V)
Port C	P120LV -	1.8V CMOS 🔹	Min:0.6V		Max:1.6V	0.900	(V)
Port D	P120LV -	1.8V CMOS 🔹	Min:0.6V	· · · · · · · · · · · · ·	Max:1.6V	0.900	(V)
CLK IN	P300ST -	1.8V CMOS 👻	Min:0.6V		Max:1.6V	0.900	(V)
				OK	Cancel	Def	ault

Figure 4-23 Trigger Level dialog box for Low Voltage Probes

Item	Description	
Probe Type	For LAP-F1. All currently available probe types (Low-voltage	
	and Clock In) are all defined as in this menu.	
Trigger Level		
Port	The 4 ports can have individual trigger voltage levels. (Port A has	
	ch. A0-A15 etc).	
Probe Type	Select the probe type being used: P120LV is the Low-voltage	
	probe.	
ІО Туре	Choose between four pre-set trigger levels.	
Threshold	Adjust the duty cycle; voltages below the threshold are defined	
	by the LAP-F1 as Low or 0, and voltages above are defined as	
	High or 1.	

Table 4:18 Trigger Level dialog box description

4.17.2.2.DSO Connection

A DSO Connection can be set up when users want to import and display a DSO signal in the ZP-Logic software. This can be useful since the LAP-F1 does not have the ability to capture analog signals. The supported DSO models are listed in Table 4:20. Two operation modes are possible; the connection can be set up with LAP-F1 as master or slave depending on which instrument the user wants to provide the trigger signal. The two modes are described in continuation.

LAP-F1 as Master

When the LAP-F1 is the master the DSO is the slave. In this mode, the Trigger Out of the LAP-F1 connects with the Trigger In of the DSO. When the trigger event occurs, the LAP-F1 sends a trigger signal to the DSO which, upon receiving the signal, starts to capture data. See the complete connection diagram in Figure 4-24.

Figure 4-24 Connection diagram with LAP-F1 as master

> LAP-F1 as Slave

When the LAP-F1 is the slave the DSO is the master. In this mode, the Trigger Out of the DSO connects with the Trigger In of the LAP-F1. When the trigger event occurs, the DSO sends a trigger signal to the LAP-F1 which, upon receiving the signal, starts to store data. See the complete connection diagram in Figure 4-25.

Users can try to connect the DSO Trigger Out to any regular channel of the LAP-F1 if the BNC connector is occupied by another instrument.

Figure 4-25 Connection diagram with LAP-F1 as slave

> Settings

Up to 4 analog signals can be shown; see the settings dialog box in Figure 4-26.

Item	Description
Trigger Mode	
Waveform trigger	Triggered by user drag wave form to setup .
Error Tolerance	Set the time of Tolerance, maximum is 800ns, and users can also
	check Auto to calculate automatically by the program default
	checked.
Pattern trigger	The bus/Signal setting data to trigger conditions.
Group A and Group	Group A: LAP - F1 A0 - A15, B0 - B15.
В	Group B: LAP - F1 C0 - C15, D0 - D15.
	40 channels LAP-F1 model all ports from channel C8 to D15 are
	disabled. For LAP-F1 trigger conditions can only be set for 32
	channels at a time. However; there exists an OR relationship
	between the Group A and Group B; this OR condition is
	automatically enabled if the user sets trigger conditions in both of
	the groups.
Bus/Signal	The bus set point to hexadecimal. Channel can choose five kinds of
	trigger mode: High Level (1), Low Level (0), Rising Edge

	(transition from low to high), Falling Edge (transition from high to
	low) and Either Edge (Rising or Falling Edge).
Condition	To set the Interval, width and trigger the Wait functions.
Interval	The scope of input interval value. Interval triggering can be
	activated when there are at least 2 levels.
width	Enter the width of the range value of the time. Pulse-width
	conditions can be set for High/Low trigger conditions.
Wait	Wait is used for multilevel triggering with High/Low conditions.
	Ex: You want to set up a Rising (R), Rising, High (H) trigger where
	the High event satisfies a certain pulse-width (PW). When an RRH
	event is found, the LAP-F1 will check if the High satisfies the PW
	condition. If that is not the case, the LAP-F1 will either keep
	looking for an H that satisfies the condition and trigger when it
	finds it (Wait is enabled), or it will restart the search and look for a
	new RRH pattern that satisfies the PW condition (Wait is disabled;
	default option).
Go To	Trigger or the next Setup.
Preview	According to the Trigger Level. Add or delete operation can be
	performed. There are 256 Trigger Levels. When the conditions of
	P1 are satisfied the LAP-F1 looks for an event that satisfies the
	conditions of P2. When an event satisfying the last active trigger
	level is found the LAP-F1 triggers.
Edge trigger	
Trigger on channel	Triggered by the signal rising.
edge rising	
Trigger on channel	Triggered by the signal falling.
edge falling	
Trigger on channel	Triggered by any change of signal edge.
edge either	
Trigger on channel	The data latch will be followed by the channel edge states.
edge and pattern	
Timer trigger	
Hold time trigger	Triggered by setting the "Bus Width" timer.
Trigger delay	Triggered at after the expiration of specified delay time period.
Pre-Fill Data	The Trigger Position combined with the Sample Depth determines

	how many bits of pre-trigger data should be stored. The Pre-Fill
	Data determines the ZP-Logic's behavior if the trigger event occurs
	before the pre-trigger data requirement has been fulfilled. If
	unchecked (default option) the LAP-F1 will override the Trigger
	Position/Sample Depth requirement and start storing data when
	the trigger event occurs. If checked, triggering will be postponed
	until the pre-trigger data requirement has been fulfilled.
Trigger Count	Trigger on the Xth event that satisfies the trigger conditions; at the
	default value of 1 the LAP-F1 will trigger on the first event.
Trigger Mark	Place a vertical bar on all samples that meet the trigger conditions.
	By default, only one trigger bar is shown (the T-bar), but there can
	be up to 256 trigger bars. These are numbered T0, T1, T2 etc.
	(Trigger Marks are sometimes referred to as Cursors or Auxiliary
	Cursors).

Table 4:22 Acquisition/Trigger Setup dialog box description

4.19. Trigger Setup(manual)

Trigger Setup (manual) offers settings as the following figure with multiple levels triggering, trigger wait, trigger delay and so on. LAP-F1 would be triggered at first position meet conditions.

				,							

Figure 4-39 Trigger Setup(manual) dialog box

Item	Description
Group 0 (Port A/B)	The first 16 channels are sampled by ports A0-15 (Group A), the
and	next 16 in ports B0-15 (Group B) etc. For the 40 channel LAP-F1
Group 1 (Port C/D)	model all ports from channel C9 to D15 are disabled. For LAP-F2,
	A,B.C,D Port, each Port has 8 ports. For LAP-F1 trigger conditions
	can only be set for 32 channels at a time. However; there exists an
	OR relationship between the Group 0 and Group 1; this OR
	condition is automatically enabled if the user sets trigger
	conditions in both of the groups.
Trigger Mode	
Internal Trigger	Fulfillment of a condition set makes the LAP-F1/2 emit a trigger
	signal.
Trigger Condition	5 trigger conditions are available: High Level (1), Low Level (0),
	Rising Edge (transition from low to high), Falling Edge (transition
	from high to low) and Either Edge (Rising or Falling Edge).

Activate	Enable the trigger setup; this is done on a level-to-level basis
Wait	Wait is used for multilevel triggering with High/Low conditions.
	Ex: You want to set up a Rising (R), Rising, High (H) trigger where
	the High event satisfies a certain pulse-width (PW). When an RRH
	event is found, the LAP-F1/2 will check if the High satisfies the PW
	condition. If that is not the case, the LAP-F1/2 will either keep
	looking for an H that satisfies the condition and trigger when it
	finds it (Wait is enabled), or it will restart the search and look for a
	new RRH pattern that satisfies the PW condition (Wait is disabled;
	default option).
Set As Previous	Copy the trigger conditions from the previous level.
Level	
Default	Reset the level to default.
Pulse-widths and Int	rervals
Enable Interval	Interval triggering can be activated when there are at least 2
(Time)	levels.
Interval (Time) –	When Interval is enabled, for the condition set to be satisfied there
Min	needs to be a certain distance in time from trigger level X to
	trigger level X-1; the default min and max values are 180 and
	8,192 clocks.
Enable Pulse-width	Pulse-width conditions can be set for High/Low trigger conditions.
Pulse-width – Min	Set the length of periods – be it High or Low- as a trigger condition.
Wait Interval end	When an Interval condition is set and this option is enabled, the
point	LAP-F1/2 will not trigger immediately (i.e. when the H/L event
	being looked for changes state) upon finding an event that satisfies
	the Interval condition, but wait until the Interval Max number of
	samples is reached and then trigger. The Interval Max is counted
	from the beginning of the H/L event in question.
Wait Pulse-width	When a pulse-width condition is set and this option is enabled, the
end point	LAP-F1/2 will not trigger immediately (i.e. when the H/L event
	being looked for changes state) upon finding an event that satisfies
	the pulse-width condition, but wait until the Pulse-width Max
	number of samples is reached and then trigger. The Pulse-width
	Max is counted from the beginning of the H/L event in question.

Trigger Levels

Trigger Level	There are 256 Trigger Levels. When the conditions of Level 1 are
	satisfied the LAP-F1/2 looks for an event that satisfies the
	conditions of Level 2. When an event satisfying the last active
	trigger level is found the LAP-F1/2 triggers. Note that Level X must
	be activated before Level X-1 can be activated.
Pre-Fill Data	The Trigger Position combined with the Sample Depth determines
	how many bits of pre-trigger data should be stored. The Pre-Fill
	Data determines the ZP-Logic's behavior if the trigger event occurs
	before the pre-trigger data requirement has been fulfilled. If
	unchecked (default option) the LAP-F1/2 will override the Trigger
	Position/Sample Depth requirement and start storing data when
	the trigger event occurs. If checked, triggering will be postponed
	until the pre-trigger data requirement has been fulfilled.
All Levels Inactive	Disable all trigger levels.
Default All Levels	Set all trigger levels to default.
Default All Levels Trigger Count	Set all trigger levels to default. Trigger on the Xth event that satisfies the trigger conditions; at the

Table 4:24 Trigger Options dialog box description

4.21. Trigger Level

See chapter 4.17.2.1.

4.22. Protocol Trigger

The Protocol Triggers are sophisticated hardware triggers specially designed for certain protocols. These triggers open a well of triggering opportunities; for the supported protocols it is possible to trigger on packets, read/write conditions, addresses etc. The triggers are hardware based, i.e. everything happens in the instrument. The LAP-F1 comes with 6 protocol triggers:

- I2C
- I2S
- SPI
- SVID
- UART
- CAN2.0B

See the dialog box in figure 4-41 for an example of the dialog box for the I2C trigger.

Item	Description
Active	Activate the protocol trigger.
Conditions	Select the data pattern that is to be triggered on.
Preview	See a visual representation of the constructed condition set.

Table 4:25 Protocol Trigger dialog box for I2C description

4.23. Single Capture

Capture samples one time using the current Acquisition Settings and Trigger Conditions.

Hot Key: F5.

4.24. Repeated Capture

Repeated Capture is used to restart acquisition periodically until a Stop Condition is met. The Stop Condition can either be a function of number of triggers (trigger X

times then stop) or of time (trigger periodically for X seconds then stop); see figure 4-42.

Hot Key: CTRL + F5.

Repeated Capture Setting	X
Repeated Acquisition Settings	
Acquisition Interval	second(s) 💌
Stop Condition	
Trigger 10	time(s)
C Trigger 1	minute(s) 🔻
	ОК

Figure 4-42 Repeated Capture dialog box

Item	Description
Acquisition	Choose how often acquisition should restart. The available intervals
Interval	are: 1-2,592,000 seconds, 1-43,200 minutes, 1-720 hours or 1-30
	days; it is 1 second by default.
Stop Condition	
(Number of times)	Choose the number of times the acquisition should be restarted.
	LAP-F1 will then restart acquisitions until the limit is reached.
	1-65,536 times is available; 10 times is the default option.
(Time)	Choose how long (in time) the acquisitions should be restarted.
	LAP-F1 will then restart acquisitions until the limit is reached. The
	available time limits are: 1-2,592,000 seconds, 1-43,200 minutes,
	1-720 hours and 1-30 days.

Table 4:26 Repeated Capture dialog box description

4.25. Stop

Stop an ongoing acquisition. The user can chose between two different software behaviors when pressing Stop.

- Show the previous (complete) acquisition
- Show the newly acquired data

Switch between the two alternatives in the General Settings.

4.26. Autocapture

The Autocapture is similar to the Single Capture (chapter 4.23), but the optimal sample rate is auto detected by the software.

Analysis

Press ALT + D to open this Main Menu item with the keyboard.

4.27. Menu Layout

Figure 4-43 Analysis drop-down menu

4.28. Active Range

Adjust the analysis range by adjusting the position of the so-called Ds and Dp bars. The Ds-bar marks the beginning of the active range and the Dp-bar marks the end. The Active Range is used to reduce the size of acquisitions by hiding parts of the acquired data. This can be useful for navigation, reducing file sizes etc. These bars are locked whenever the user has not entered the Active Range.

NOTE Adjusting the Active Range will hide – not delete – data.

4.29. Bars

The ZP-Logic Waveform / State List areas come with 5 standard bars (these are sometimes referred to as Cursors). The bars delimit the analysis range and facilitate navigation and observation. The five standard bars are described in Table 4:27.

Bar	Description
Ds bar	Demarks the beginning of the buffer data area; use the Active Range function to
	adjust its position.
Dp bar	Demarks the end of the buffer data area; use the Active Range function to
	adjust its position.
T-bar	The T-bar marks the trigger event. Press T to center the waveform view on the
	T-bar.
A-bar	Default bar intended for navigation and measurement that the user can move
	freely. Press A to center the waveform view on the A-bar.
B-bar	Default bar intended for navigation and measurement that the user can move
	freely. Press B to center the waveform view on the B-bar.

Table 4:27 Description of the five standard bars

4.29.1. Add

Users can insert up to 250 additional bars. When adding a bar the user can select color and where it should be positioned (in time). The bars will automatically be named A0-A9, B0-B9 etc. User comments can be added to the bars after addition; see Figure 4-78.

Note that there is a second way to add bars: In pointer mode (see 4.47.1), move the cursor to the very left part of the waveform. The pointer will convert to a plus symbol and when left-clicking a bar will be added.

4.29.2. Reposition

Move a bar; the bar's new position will depend on how the user enters the reposition dialog box:

- If the user accesses the function from the Main Menu, the chosen bar will be placed at the center of the waveform area.
- If the user accesses the reposition dialog box by right-clicking in the waveform area, the chosen bar will be moved to where the user clicked.
- **NOTE** The T-bar cannot be moved and the Ds- and Dp-bars can only be moved using the Active Range function; see chapter 4.28.
- **NOTE** Users can also center the waveform on a bar by means of keyboard shortcuts. This is not the same as repositioning the bar. To center the display on the T-bar press T and correspondingly for the A- and B-bars. To focus on user defined bars use the number keys. To focus on for example the D1-bar, press 1 four time.

4.29.3. Delete

Any bar that is not a standard bar can be deleted.

4.30. Find

Post acquisition, Find is used to look up events that satisfy a set of user-defined conditions. There are Advanced Find and Easy Find. Find the data in the Find Results Windows. see Figure 4-45 or see chapter 4.56.

Hot Key: CTRL + F.

Press **CTRL** + \rightarrow to move to the next event that satisfies the Find conditions and **CTRL** + \leftarrow move to the previous event.

Results	Count the number of events within the Find Range that meet the
	condition set.
Advanced Find	
Find Channel	Choose the need to find bus or Protocol Decoder.
Find Range	Set to find the range of data.
Mark Bar	Mark event that meets the Find condition set with a bar; the A-bar
	is the default bar.
No.	Condition number. Set one or more conditions to find. Meet the
	conditions in order if two or more conditions.
Туре	Find type, select "Don't care" or "Packet". "Don't care" will ignore
	Packet name and other items. "Packet" follows setting items.
Packet Name	Select the packet name to find.
Packet No.	Input packet number in bus packets of each transmission when
	Packet Name is the packets of numerical type(e.g. Data). Default
	"-" with unspecified packet number. For example, Input 5 to packet
	No., that will find fifth Data packet in each signal.
Data Type	Data form to show with "Data". Hexadecimal or Binary.

Data

Input the value for numerical packets, "x" is for arbitrary value.

Figure 4-46 Advanced Find examples show

4.31. Go To

The Go To function is used to find and navigate to a bar or a Memory Page; see the dialog box in figure 4-46.

Hot Key: CTRL + G.

Figure 4-47 Go To dialog box

To go to a bar, select one from the drop-down menu. The waveform area will center on the selected bar. If there are several bars of type A (A0, A1, A2 etc) then click next to move from one bar to the next. The A-bar is the default choice. It is also possible to go to a page (read about ZP-Logic's pagination in Table 4:6). Input a page number and click Go To to move to the page. In Figure 4-48 the user has used the Go To dialog box to move to page 3 as indicated by the red frame on the page bar in the upper left corner.

4.32. Highlight Data

Highlight Data colors data that satisfies a user-defined condition to make them stand out. See the dialog box in Figure 4-49.

Highlight Data		2 ×	
Bus Name:	BUS0 -		
Data Condition:	Minimum:	Maximum:	
=	• 0	7	
Choose Color:			
	ОК	Cancel Default	

Figure 4-49 Highlight Data dialog box

Item	Description
Bus Name	Select which bus the function should focus on.
Condition	Select a condition among <i>=</i> , <i>!=</i> , <i>In Range</i> and <i>Not In Range</i> ; = is
	the default.
Value / Minimum	Input the value that is to be met.
Maximum	Input the maximum value (used for <i>Range/Not in range</i> only).
Choose Color	Data that meet the condition are highlighted with the selected
	color.

Table 4:30 Highlight Data dialog box description

Figure 4-50 shows what how the Highlight Data function works. In the example, the conditions established in Figure 4-49 are used: The data belongs to BUS0 and are equal to zero. This are highlighted with an orange color. Had the function not been used, these data would have had the same white background color as the neighboring 0X1 data.

Bus/Signal	Trigger	<mark>.</mark>	104.473	114.55	124.	626 1	134.703	144.779	154.856	164. · · · ·	932	175.009	185.085	195.16

Figure 4-50 Highlight Data example; packets with Data Min = 0 are orange

4.33. Files Comparison

Files Comparison examines how and where two files differ from each other. The number of differences between the two files is listed channel by channel in the dialog box, and new, curly traces in the waveform area evidence where the two signals differ; see an example in figure 4-50.

Figure 4-51 shows the Files Comparison dialog box and the result of a data comparison of two files in table format; the two files display a large number of differences.

Figure 4-51 Files Comparison dialog box

Item	Description
Contrast Type	
Waveform	Contrast the difference of waveform in two files.
Bus Data	Contrast the difference of bus data in two files.

Select Files	
Reference File	Select a file. Note that only open files can be chosen. Only open files
	are available.
Contrast File	Select the file that is to be compared to the Reference File. When
	contrasting with None, the Reference File settings will be used to
	make an acquisition.
Settings	
Start	Select where to start the Files Comparison, using the reference file
	as base. You can also set it to ALL.
End	Select where to end the Files Comparison, using the reference file
	as base.
Error Tolerance	Define how many sample points that may differ between the two
	files before ZP-Logic regards the two files as unequal; 0-10
	samples can be chosen (the default is 0).
Display Options	
Show files	Display the two files horizontally; unchecked by default.
horizontally	
Synchronize	Synchronize panning across the two files. This option is unchecked
navigation	by default and only available if "Show files horizontally" is checked.
Highlight	Mark the different waveforms with red wavy lines, the default is
differences	not selected.
Apply	Make changes effective.
Hide/Unhide	Hide/Unhide the Results area.
Results	
Select Channels	Select the channels to be contrasted. At least one must be chosen;
	by default all are selected.
Execute	Perform the Files Comparison. Note that this function needs to
	pre-process a temporary file; see note in chapter 4.6.
Statistics	
Results	Display the status of channels contrast, PASS means the data in the
	channel is identical for the two files and FAIL means the data is
	different.
# of differences	The column shows the number of differences between the two files
	for each channel.
Navigation	

PreviousGo to the previous difference between the two files.NextGo to the next difference between the two files.

Table 4:31 Files Comparison dialog box description

The reference file and the contrast file are displayed horizontally in the waveform area. New, orange, wavy traces ~~~~~ (one for each channel) in the lower window show where the two files differ. The orange waves marking the differences can be discerned in the lower waveform area in figure 4-51.

Figure 4-52 Files Comparison ex; differences marked in the lower window

4.34. Image Decode

The Image Decode function is specially designed for display type protocols such as CMOS Image, 7-SEGMENT LED, LCD12864, LCD1602 etc. Captured data that are decoded with one of the supported protocols are decoded and displayed as the original picture. This makes for a painless and straightforward verification of the data being correct or not. See figure 4-52 for an example of the function's output.

Figure 4-53 Image Decode for 7-Segment LED

The Image Decode function supports the following protocols:

- 7-Segment LED
- CCIR
- CMOS Image
- DM114/115
- DMX512
- LCD12864
- LCD1602
- LED Pitch Array
- LG4572
- CCIR601

Note that it's necessary to focus on the correct bus for the Image Decode function to be unlocked.

4.35. Math Operations

Create a new trace by performing a mathematical operation on two existing signals.

4.35.1. Arithmetic Operation

Using the Arithmetic operation function users can create a new signal through one the following arithmetic operations: Add, Subtract, Multiply or Divide.

ZP-Logic only accepts the creation of one arithmetic trace at a time.

Arithmetic Operation			8 X
Ochannel		🔘 Bus	
Input 1: A0	-	Mathematical Operation:	Add 🔻
Input 2: A1	•	Output:	OUTPUT1
	(OK Cancel	Default

Figure 4-54 Arithmetic operation dialog box

Item	Description
Channel/Bus	Choose to perform the operation on signals or buses (at least two buses
	must exist for this option to open).
Input 1	Select a signal.
Input 2	Select a signal to be joined with the first one using the arithmetic
	operator.
Operation	The available arithmetic operations are: Add, Subtract, Multiply and
	Divide.
Output Name	Input a name for the resulting trace.

Table 4:32 Arithmetic operation dialog box description

Figure 4-55 shows the resulting trace from an ADD operation on signals A0 and A1.

4.35.2. Boolean Operation

With the Boolean operation, users can create a new signal using one of the Boolean operators; see Figure 4-56.

Note that an Arithmetic operation can also be performed on buses, granted that at least two buses have been created. However, ZP-Logic only accepts the creation of one Boolean trace at a time.

Boolean Ope	eration		? ×				
Input 1:	A0 -	Boolean Operation:					
Input 2:	A1 •	Output:	OUTPUT1				
	Oł	Cancel	Default				

Figure 4-56 Boolean Operation dialog box

Item	Description
Input 1	Select a signal.
Input 2	Select as second signal to be XX to the first one.
Boolean	The available Boolean operators are: AND, OR, NAND, NOR, XOR, XNOR
Operator	and NOT. NOT takes only one argument and inverts it.
Output Name	Input a name for the resulting trace.

Table 4:33 Boolean Operation dialog box description

Figure 4-57 shows a trace created from signals A0 and A1 using the Boolean operator AND.

4.36. Noise Filter

The Noise Filter is used to filter out short-lasting pulses or dips in signals that the user considers to be noise; see the dialog box in Figure 4-58.

After activating the Noise Filter, users select one or more channels to be filtered and move them to the right column using the right-pointing arrows. To select two or more channels at the same time, use the CTRL and SHIFT keys.

Once a channel is in the right column, the user can choose just how short pulses/dips in the signal of that channel have to be to be filtered out. Lengths are measured in sample points or time.

Figure 4-58 Noise Filter dialog box

4.37. Draw Analog Waveform

The Draw Analog Waveform function is used to plot traces based on the value of bus data. It is especially useful for data that can be conveniently displayed visually, such as an ADC output represented by a sine wave. The function is available for simple buses (no packets); see the setup dialog box in Figure 4-59.

Figure 4-59 Draw Analog Waveform dialog box

Item	Description			
Mode Setting				
Single Analog Display	Draw the analog waveform on a dedicated channel; default			
	option.			
Mixed Analog Display	Show the drawing on top of the traces its based on.			
Signed Setting				
Unsigned	Binary data are read as unsigned; default option.			
Signed	Binary data are read as signed.			

Table 4:34 Draw Analog Waveform dialog box description

Figure 4-60 shows a simple example output based on four signals changing state on regular intervals (signals A0 in dark red to A4 in green are used in the example).

4.38. Signal Activity

Signal Activity offers the user real-time views of what the probes are seeing. Two modes are available; Real-time Frequencies and Signal Status. By means of these functions the LAP-F1 monitors signal frequencies and states, thus assuming the function of a frequency counter and that of a logic pen.
4.38.1. Real-time Frequencies

Real-time frequencies of all channels as measured by the probes are shown; see Figure 4-61. The frequencies are updated twice per second.

Real-ti	I-time Signal Frequencies															
O	Display maximum freque	ncy 💿 (Display n	eal time freque	ncy							Detection frequency : 1.0GHz -

Figure 4-63 Options drop-down menu

4.40. eMMC/SD (4 ch.default)

The LAP-F1 can decode both eMMC5.1 and SD3.0 protocols. When making a standard purchase, the LAP-F1 offers the possibility to decode 4 – 62 four - eMMC signals (four special eMMC probes are delivered for this purchase). See Figure 4-64 for the eMMC display setup dialog box. These settings can be changed both before and after acquisitions.

NOTE To fully decode and trigger on all 11 eMMC signals users must purchase the optional Full eMMC/SD function; see chapter 4.41.

NOTE It is also possible to trigger on eMMC events; see chapter NOTE .

NOTE 4CH P300ST Type A/B/C/D probe connection sequence. See the table below.

Table 4:35 eMMC dialog box

4.41. eMMC/SD (32ch)

This optional function is available for the LAP-F1.

Purchasing the optional, full eMMC5.1 and SD3.0 decoding capability, the user will unlock 32 channels for 2 GHz sampling to fully trigger and decode all the signals of

eMMC5.1/SD3.0. As eMMC only has 11 signals the remaining channels can be used for other high-speed acquisitions.

The menu is the same as the one shown in Figure 4-64.

NOTE 32CH P300ST Type A/B/C/D probe connection sequence. See the table below.

2 х I/O Delay Post Calibration Input Delay A0: 0 *625ps *625ps A1: 0 *625ps A2: 0 *625ps A3: 0 Export OK Cancel Default Import

The I/O Delay function lets users correct eMMC timing skew.

Figure 4-66 I/O Delay dialog box

Item	Description
Post Calibration	This option is used to adjust timing skew post-acquisition.
Input Delay	This option is used to adjust timing skew pre-acquisition.
A0-A3	Insert the desired delay per channel. (4 channels are available in this
	example as the limited eMMC decoder capability is used).
Import	Import a timing information .cb file.
Export	Export a timing information .cb file.

Table 4:36 I/O Delay dialog box description

4.44. Long-time Record

This optional function is available for the LAP-F1.

The Long-time Record (LTR) function lets the user stream data directly to the computer over USB3.0, thus allowing much longer acquisitions than during normal operations when the samples are stored in the LAP-F1's internal memory. The LTR function is perfect for, as an example, burn-in tests. The maximum length of the acquisition depends on the acquisition rate, the number of channel sampled, and the available memory. Post acquisition, the user can search for patterns in the acquired data.

A relatively powerful PC is required to run the LTR function flawlessly. See Table 4:38 for the recommended PC setup.

NOTE When the average write speed is higher than 318MB/s, the highest setting can be used 4CH 400MHz, 8CH 300MHz, 16CH 100MHz, 32CH 50MHz.

Table 4:38 Standard PC requirments for the LTR function

NOTE While running the LTR function it is recommended that the PC is not used for anything else.

Enable LTR, software add the button "Go to the timestamp", click the button in the red box as followed figure, and bring up the setting dialog can input the timestamp need to go to.

Figure 4-68 LTR Go to the timestamp dialog box

4.45. Channel Folding

This optional function is available for the LAP-F1.

Channel Folding is used to concentrate the total memory of the LAP-F1 on a limited number of channels. Much like folding a paper increases the thickness by a factor of two Channel Folding doubles the available memory per channel if half the channels are deactivated. The maximum memory 1 Gb available per channel. Any channel can be deactivated regardless of the port it belongs to.

Channe	hannel Folding

4.47. Cursor Type

The user can choose between two cursor types. Note that for both types, left/right movement in the waveform is achieved with the mouse wheel.

Hot Key: SPACE (the cursor mode changes temporarily when the user presses and holds the SPACE bar).

4.47.1. Pointer

In Pointer mode, the left mouse button is used for zooming; click and drag squares with the pointer to zoom in.

- To zoom in; form squares by dragging downwards/leftwards. The area covered by the square will be amplified to occupy the entire waveform area. In other words, form small squares to zoom in quickly.
- Zooming out is achieved by doing the opposite of zooming in; drag squares upwards/rightwards. The larger the square, the faster the zoom-out.
- To move a bar, left click on the bar name and drag sideways.

4.47.2. Hand

In Hand mode, the left mouse button is used for panning; click and hold the left mouse button to move left and write in the waveform area.

To move a bar, left click on the bar name and drag sideways.

4.48. Display Type

The menus that appear when right-clicking in the interface are found in these subchapters.

4.48.1. Waveform

In Waveform view, the state of each channel is shown as a trace that changes between high and low depending on the state of the signal. This is the default view mode.

Сору	Copy the selected channel or bus. Left-click with the mouse
	can be combined with pressing and holding SHIFT to select
	several channels or with CTRL to select a range of channels.
	Hot Key: CTRL + C.
Paste	Paste the copied channel(s) or bus(es). Hot Key: CTRL + V.
Delete	Delete the selected channel(s) or bus(es). Hot Key: DELETE.
Rename	Rename the selected channel or bus. This option is not
	available when multiple channels or buses are selected. Hot
	Key: F2.
Functions	
Bus/Protocol Decoder	Access the bus or protocol decoder properties; see chapter
Properties	4.15 and 4.16. This item is only available when right-clicking
	on a bus and which menu is opened depends on whether a
	protocol decoder is assigned or not to the bus.
Numeric Base /	Change the data format; see chapter 4.61.
Encoding	

Image Decode	Display the data as an image; see chapter 4.34.
Draw Analog Waveform	Draw an analog waveform to indicate the change of state; see
	chapter 4.37.
Invert	For traces, display high levels as low and vice versa. Inverted
	traces are drawn with dotted lines and a horizontal, blue bar
	is shown above the channel name. All channels can be
	inverted independently. See Figure 4-75.
Restore Channels to	Restore all Bus/Channels settings to default.
Default	

Table 4:42 Channel column; right-click menu description

NOTE Move the cursor to the bottom line of channel, the cursor will turn into an icon showing a two-sided arrow cut horizontally by a bar. Click and hold the left key and drag to adjust the height of trace.

Figure 4-75 shows an inverted signal. Note that the trace has become dotted and that a blue bar appears above the channel name (A3).

Figure 4-75 Signal inversion example; signal A3 is inverted

When right-clicking in the trigger column, the menu from Figure 4-76 is shown. The menu is used to set the channel's trigger condition as an alternative to clicking through the trigger box for the right condition.

Figure 4-76 Trigger colum; right-click on channel menu

Item	Description
Don't Care	No trigger condition.

High	Trigger on a high level, i.e. the state of the signal is 1.
Low	Trigger on a low level, i.e. the state of the signal is 0.
Rising Edge	Trigger on a change of state of the signal from 0 to 1 (low to high).
Falling Edge	Trigger on a change of state of the signal from 1 to 0 (high to low).
Either Edge	Trigger on a change of state of the signal; either from 0 to 1 (low to
	high) or from 1 to 0 (high to low).
Default	Reset the trigger conditions of all channels.

Table 4:43 Trigger column; right-click on channel menu description

4.48.2. State List

State List is a numeric view of the samples. As an alternative to the waveform traces, the State List shows all samples as digits. If the logic state of a signal is low then "0" is shown and if it is high then "1" is shown. Unknown states are shown as "U". Each column shows the samples of one channel and the leftmost column shows the sampling time. The State List view is shown in Figure 4-80.

Figure 4-80 State List view

Note that there are three main presentations of the samples in the State List. One option is to show all samples. Alternatively, the user can select to display only those samples that include at least one change of state or in data. Table 4:46 shows an example of how this works: Samples #1, #2 and #3 are shown if the user views all samples. If the user chooses to show changes in state only then Sample #2 will be hidden, as all channel states are identical to those of sample #1. The purpose of showing samples with changes in state only is to facilitate observation by reducing the quantity of displayed data. Likewise, the user can choose to only show samples where there has been a change in the data; see an example of this in Figure 4-82.

NOTE No	view mode w	ill delete sa	amples, only	hide them
---------	-------------	---------------	--------------	-----------

Timest	amp	ch. A1	ch. A2	ch. A3	ch. A4	
0 ns	(sample #1)	1	1	1	1	
5 ns	(sample #2)	1	1	1	1	
10 ns	(sample #3)	1	0	1	1

Figure 4-82 Show changes in data only example (I2C)

In State List view, the menu from Figure 4-83 is shown when right-clicking in the channel row above the number area.

Add Protocol Decoder	
Bus/Protocol Decoder Property	
Format Row	►

Figure 4-83 Channel/Bus (State List view); right-click menu

Item	Description
Add Protocol Decoder	Add a protocol decoder; see chapter 4.16.
Protocol Decoder	Set the protocol decoder properties; see chapter 4.16. This
Properties	menu item is only available when clicking on a bus.
Format Row	Change the channel order or resize the column widths.

Table 4:48 Channel/Bus (State List view); right-click menu description

4.49. Refresh

After the "Active Range" is activated, users can click it to refresh the selected data.

4.50. Zoom

Zooming can also be achieved using the mouse while holding CTRL; see chapter 4.47. Note also that all zoom functions are unavailable in the State List view.

4.50.1. In

Zoom in the waveform.

Hot Key: Z.

4.50.2. Out

Zoom out the waveform.

Hot Key: SHIFT + Z.

4.50.3. Fit to Screen

Show all data between Ds and Dp in the waveform view area.

Hot Key: CTRL + ALT + P.

4.50.4. Previous

Cancel the last zoom. In other words; go back to the previous zoom level.

Hot Key: CTRL + Z.

4.50.5. Cancel Previous

Undo the previous zoom command.

Hot Key: CTRL + Y.

4.51. Control Panel

The Control Panel provides direct access to important acquisition and triggering settings and thereby helps to speed up the user's interaction with ZP-Logic. An example could be when the user wishes to redo a capture with a higher sample rate. The Control Panel is located in the rightmost part of the window estate. See Figure 3-2 for the Control Panel right-click menu.

Item	Description
Zoom	Adjust the waveform zoom level; see chapter 4.50.
Memory depth	Select the memory depth per channel; see Table 4:16.
Sampling Mode	Adjust the sample rate by selecting a value from the pull down menu,
	inputting a value by hand or by dragging the pointer of knob. Click the
	grey, double arrows to switch between external and internal acquisition
	mode; see Table 4:16 for explanations of these.
Trigger	The trigger position determines which samples are stored. At 10%, 10%
Position	of the available memory is allocated to pre-trigger data and 90% to
	post-trigger data.
Action Wheel	See Figure 4-84 and Table 4:50.

Table 4:49 Control Panel description

Figure 4-84 Action Wheel

#	Item	Description
А	Cursor type	Switch between cursor types Hand and Pointer; see chapter
		4.47.
В	Single Capture	Capture once; see chapter 4.23.
С	Autocapture	LAP-F1 selects the optimal sample rate and samples; see
		chapter 4.26.
D	Repeated Capture	Capture on regular intervals; see chapter 4.24.
Е	Trace information	Show information inside the traces (between two edges); see
		the available information types in Table 4:11. Note that there
		needs to be sufficient space between the edges for information
		to be shown. See Figure 4-85 as an example of times being
		displayed.

F	Previous	Center the display around the previous event that satisfies the
		Condition Set of the Find function.
G	Next	Center the display on the next event that satisfies the Condition
		Set of the Find function.

Figure 4-85 Time between two edges is displayed inside the traces

4.52. Memory View

Memory View lets users see what the memory looks like after the signals have been transmitted. By decomposing the packets into basic elements, the relationship between data and addresses in a protocol is clarified. The Memory View window is located in the Secondary Display Area.

Concretely, the Memory View window consist of tables that show which data have been read from- and written to which address in the memory. Write data are written in blue; Read in blue; see an example of read data in Figure 3-1.

Two view modes can be accessed by right-clicking: Compact (default) and Full. The Compact Mode saves space as the information is presented in a matrix form; addresses are found by adding the column number/letter to the end of the row name, and the data located at that address is read directly from the intersection of the row/column.

	T-bars cannot be chosen.
Columns per	Choose how many cells to display per line. 4-100 is the permitted range;
line	16 is default.
Color	Change the color settings.

Table 4:52 Memory View options dialog box description

4.53. Navigator

The Navigator is a condensed form of the main waveform that is always zoomed to fit the entire capture of the pages in focus. It facilitates waveform navigation by providing an overview of the entire acquisition and a tool for quick movement between distant parts of the acquisition. The Navigator is synchronized with the main waveform so users can shift the waveform focus from one part of the acquisition to another simply by clicking in the Navigator.

A light blue frame (in the left part of Figure 4-88) in the Navigator indicates which part of the waveform that is in focus; this frame naturally changes size when zooming as it is inverse proportional to the zoom rate. Four signals are shown at a time; scroll up or down to focus on other channels.

The Navigator is show by default under the waveform area in the Secondary Display area; see Figure 4-88.

Figure 4-88 Navigator window example showing the AC97 protocol

4.54. Packet List

The Packet List shows all the acquired packets in their decomposed form. By presenting the packets in list form, the Packet List facilitates observation and analysis of all packets and their relation. Only packets under a protocol decoder can be displayed. The Packet List is located in the Secondary Display area; see Figure 4-89.

If packet in the Packet List is double-clicked, the waveform display focuses shifts focus to the location of that packet. On the contrary, double-click the waveform of a packet, the packet list also jumped to the location of the packet, and with the red box prompts, its packet guild grey light show. Mobile waveform window, the packet list will also synchronously mobile display packet, on the other hand, the mobile packet in the packet list, waveform window will not be shown synchronously move.

4.55. Statistics

Statistics Window is under the waveform view area after activated; it displays the quantity of positive and negative periods in a specific time range.

The Statistics window facilitates counting of signal transitions for each channel. Specifically, *Full-*, *Positive-* and *Negative periods* are all counted. *Conditional* counters are also shown; these count all periods that are shorter or longer than a set of user defined conditions. Finally, it is also possible to adjust the data range, i.e. to only count activity within a certain range of the total acquisition.

The Statistics window is shown in Figure 4-94; it is open by default and located in the Secondary Display area.

4.56. LTR Monitor

The LTR Monitor window is used to monitor the data transfer between the DUT and the computer when using the Long-term Record function. It is located in the Secondary Display area; see Figure 4-99.

Long-time	record data monitor						→ ‡ ×
Data Mor	itor Data Lost Data Lost	dating waveform instantly	while recording

0.0000 M	B/s 10000.0000 MB/s	0.0000 MB/s	0.0000 MB/s	10000.0000 MB/s	0.0000 MB/s	1s (100%)	Ons (0%)
•							Þ
Navigato	r Packet List Statistics	Memory View Long-	time record data mor	nitor Find Results			

Figure 4-99 TLR Monitor window

NOTE The high Lost Data percentage in the example owes to the screenshot being taken in demo mode.

Item	Description
Read	
Read Rate	The current rate at which the LAP-F1 reads data.
Min Read Rate	The minimum rate at which the LAP-F1 can read data.
Max Read Rate	The maximum rate at which the LAP-F1 can read data.
Write	
Write Rate	The current rate at which the LAP-F1 writes data.
Min Write Rate	The minimum rate at which the LAP-F1 can write data.
Max Write Rate	The maximum rate at which the LAP-F1 can write data.
Recorded Data	Data quantity currently acquired.
Loss of data	Data quantity currently lost.
File Save	Location where the acquired data are stored.
Data Lost	
No.	The number of lost data.
TimeStamp	Time of lost data.
Width	The width of lost data
Updating waveform	While recording, updating waveform instantly.
instantly while recording

4.57. Find Results

The Find results function is used to locate events within a certain data range, using a straight-forward interface shown in figure 4-99.

Find Results					
Find.	Find Pulse-width			1 Jump To Previous Next	
Number(204	7) TimeStamp	Data	Time Difference	·	
1	-653.4us	Rising Edge	Ons		
2	-650.2us	Rising Edge	3.2us		
3	-647us	Rising Edge	3.2us		
4	-643.8us	Rising Edge	3.2us		
5	-640.6us	Rising Edge	3.2us		
6	-637.4us	Rising Edge	3.2us		
7	-634.2us	Rising Edge	3.2us		
8	-631us	Rising Edge	3.2us		
9	-627.8us	Rising Edge	3.2us		
10	-624.6us	Rising Edge	3.2us

Navigator Packet List Statistics Memory View Find Results					

Figure 4-100 Find Results window

Item	Description		
Find	Bring up the find dialog box, set the need to find the bus/channel		
	and conditions.		
Find Pulse-width	Set the search condition and search the pulse.		
Jump To	Input one index value matching statistics condition and click 'Jump		
	To' go to that value in the statistics data and mark it with a bar.		
Previous	Find the previous data that fitting the condition.		
Next	Find the next data that fitting the condition.		
Number	To display the number of eligible, starting from 1 until the last.		
TimeStamp	To show eligible time pattern.		
Data	Displays the starting point of the data found.		
Time Difference	Show the time difference between the previous result and the result.		

Table 4:58 Find Results window description

4.58. Timing Bar

Figure 4-101 Timing Bar
Item	Description
Scale	The scale is the inverse of the zoom level.
Total	Total acquisition time.
Waveform	Location of the current center of the waveform.
Center	
Display Range	Timing information for the part of the waveform currently in view.
A Pos	The position of the A-bar; click to select another bar.
BPos	The position of the B-bar; click to select another bar.
A-T	Time difference between the A and T-bars; click to select a
	different range.
B-T	Time difference between the B and T-bars; click to select a
	different range.
A ~ 0 ~	Select a bar.
P	Memory Page on which the bar is located.
0	Go to the selected bar.
	Reposition the selected bar to the current center of the waveform
	area.

Table 4:59 Timing Bar description

4.59. Arrange Windows

The windows showing the files (as waveforms or as lists of states) can be moved around freely.

4.59.1. Horizontal

Display the open files above each other.

4.59.2. Vertical

Display the open files next to each other.

4.59.3. Reset Window Locations

Reset all windows to their default positions.

4.60. Split Screen

If more than one screen is connected to the computer ZP-Logic is running on, users can choose to show ZP-Logic on either one of the screens or on both.

4.60.1. Show on All

Show ZP-Logic on both detected screens. The waveform area is amplified to show a larger part of the traces.

4.60.2. Show on Primary

Show ZP-Logic on what is defined as the primary screen.

4.60.3. Show on Secondary

Show ZP-Logic on what is defined as the secondary screen.

4.61. Numeric Base / Encoding

Users can choose among seven types of number systems and encodings for the displayed bus data; see Table 4:60. Hexadecimal is the default format.

Numeric base / Encoding	Description
Binary	Data are shown using the binary number system.
Decimal	Data are shown using the decimal number system.
Decimal (Signed)	Data are shown using the signed decimal number system;
	one bit (the first on the left) is used to specify the sign.
Hexadecimal	Data are shown using the hexadecimal number system.
ASCII	Data are encoded as ASCII characters; this only works for
	buses that comprise at least seven signals.
Gray Code	Data are encoded as Gray code.
Complement	Data are encoded as complements.

Table 4:60 Available data formats

Help

Press ALT + H to open this Main Menu item with the keyboard.

4.62. Menu Layout

About ZP-Logic	
About ZEROPLUS	
Help	F1
Hot key list	
Send Feedback	

Figure 4-102 Help drop-down menu

4.63. About ZP-Logic

The About ZP-Logic window shows the software version, modification history, the instrument model, serial number and so on; see Figure 4-103. This window is almost identical to the information window shown the first time the ZP-Logic is started.

Figure 4-103 About ZP-Logic information window

4.64. About Zeroplus

The About Zeroplus item on the menu takes the user to the Zeroplus website; this is opened in a new tab in the default web browser.

4.65. Help

Click the Help item to open the Help file. The Help file contains descriptions of the installation procedure and of menus and functions, answers to FAQs etc. It is contains a Search function to facilitate lookups.

Hot Key: F1.

4.66. Hot Keys

The Hot Keys item displays a list of all Hot Keys combinations. Hot Keys are keyboard combinations that the user can press to execute an action or a function without having to open a menu or use the mouse. Some Hot Keys require only a single keystroke.

Users can customize the Hot Keys in the Settings menu; see chapter 4.11.6 for descriptions of the dialog box fields.

Command	Hot Keys	Description
File→New	Ctrl+N	Create a new file.
File→Open	Ctrl+O	Open an exit file.
File→Close	Ctrl+F4	Close the current file.
File→Save	Ctrl+S	Save the file.
File→Print	Ctrl+P	Print the file.
File→Print Preview	Ctrl+Alt+I	Preview the printing.

Acquisition→Single Capture	F5	Capture the signal.
Acquisition→Repeated Capture	Ctrl+F5	Capture the signal continuously.
Add depth	Ctrl+U	Increase the sampling depth.
Decrease depth	Ctrl+D	Decrease the sampling depth.
Analysis→Find	Ctrl+F	Open the Find dialog box to set find conditions.
Previous	Ctrl+←	Go to the previous find condition.
Next	Ctrl+→	Go to the next find condition.
Acquisition→Add	Ctrl R	Open the Add Protocol Decoder
Protocol Decoder	Cuitb	dialog.
Analysis→Go To	Ctrl+G	Open the Go Todialog.
View→Cursor Type	Space	Switch between Normal and Hand mode.
View→Zoom→Out	Z	Zoom out the waveform.
View→Zoom→In	Shift+Z	Zoom in the waveform.
Whole page	Ctrl+Alt+P	Whole page mode.
Recovery zoom	Ctrl+Z	Return to the last zooming.
Cancel zoom	Ctrl+Y	Cancel the last zooming.
Help→Help	E1	Open the operating instructions of
	ι⊥	Zeroplus Logic Analyzer.
Go to A bar	Δ	Move A Bar with waveform to the
		middle of waveform area and lock it.

Go to B bar	В	Move B Bar with waveform to the middle of waveform area and lock it.
Go to T bar	т	Move T Bar with waveform to the middle of waveform area.
Reset A bar	Shift+A	Move A Bar to the middle of
		waveform area.
Reset B bar	Shift+B	Move B Bar to the middle of
	Shine + D	waveform area.
Reset T bar	Chi⊕⊥T	Move T Bar to the middle of
	Simil	waveform area.
Change scale	Ctrl+Mouse	Change the display scale of waveform
	Wheel	area.
Left		Move the display area/active bar to
	~	the left.
Right	_	Move the display area/active bar to
		the right.
Up	↑	Move the display area upwards.
Down	Ļ	Move the display area downwards.
Previous page	Ctrl+Page Up	Go to the previous memory page.
Next page	Ctrl+Page Down	Go to the next memory page.
First page	Ctrl+Home	Go to the first memory page.
Last page	Ctrl+End	Go to the last memory page.
Previous view	Page Up	Go to the previous visible area.
Next view	Page Down	Go to the next visible area.

First view	Home	Go to the front end of the current visible area.
Last view	End	Go to the tail end of the current visible area.
Сору	Ctrl+C	Copy the selected item(s) in the channel area.
Paste	Ctrl+V	Paste the copied item (s) in the channel area.
Delete	Delete	Delete the selected item.
Rename	F2	Rename the selected item.
Select all	Ctrl+A	Select all channels in the channel area.
Go to bar	Number Key	Move the corresponding Bar and the waveform to the middle of screen.
Move bar	Shift+Number Key in the main keyboard	Move the corresponding Bar only to the middle of screen.
Cancel	Esc	Cancel
Open menu	Alt+Letter with a baseline	Perform the menu command(or command of other baseline).
Show waveform	Wheel	Move the waveform.
First channel	Ctrl+ ↑	Select the first channel.
Last channel	Ctrl+↓	Select the last channel.
Previous channel	Shift+ ↑	Select the previous channel.(Multiple-choice)

Next channel

Shift+↓

Select the next channel.(Multiple-choice)

Table 4:61 Hot Key descriptions

4.67. Send Feedback

The Send Feedback form can be used to contact our Technical Support if the user runs into a problem. Users are requested to provide contact information and a description of the problem. Attachments can also be uploaded; see Figure 4-104 Send Feedback dialog box The benefit of using the Send Feedback form to contact the Technical Support is that data and information is automatically added to the communication: file information, instrument model, acquisitions settings, system parameters etc. This information makes it easier for the support team to get to the root of the problem and therefore improves response times.

Users who prefer to contact our Technical Support team by means of regular email should use the following address: <u>service_2@zeroplus.com.tw</u>

Problem Feedback	- ×
