1	Software Register.....	3
2	User Interface.....	6
3	Operating Instructions	9

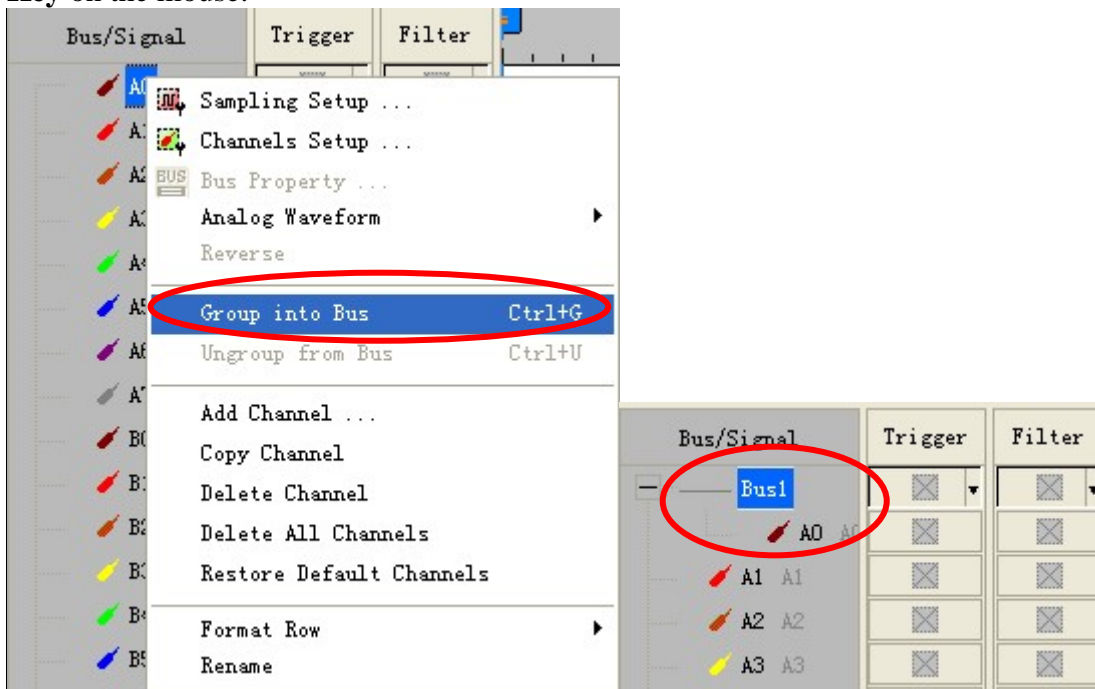

1 Software Register

Please register the software as the following steps:

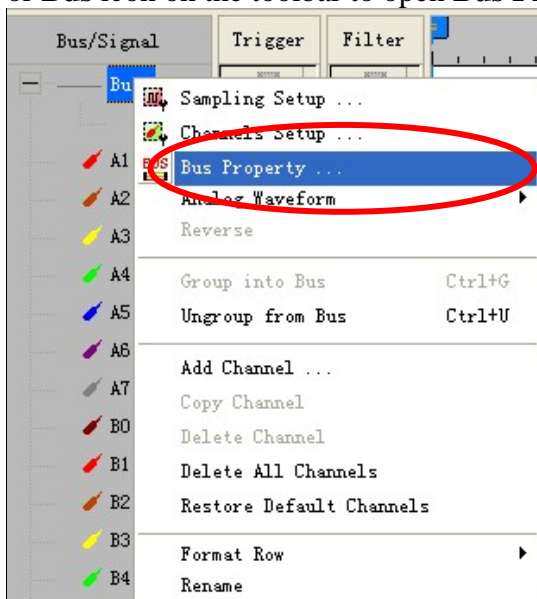

※ Remark1: The registration steps for all protocol analyzers are the same, you can complete the registration by following procedures. Following is an example on how to register the Protocol Analyzer BUS.

※ Remark2: We won't have additional notice for you, when there is any modification of the module specification. If there is some unconformity caused by the module version upgrade, users should take the module software as the standard.

STEP 1. Open the Logic Analyzer and group the unanalyzed channels into **Bus1** by pressing the **Right Key** on the mouse.

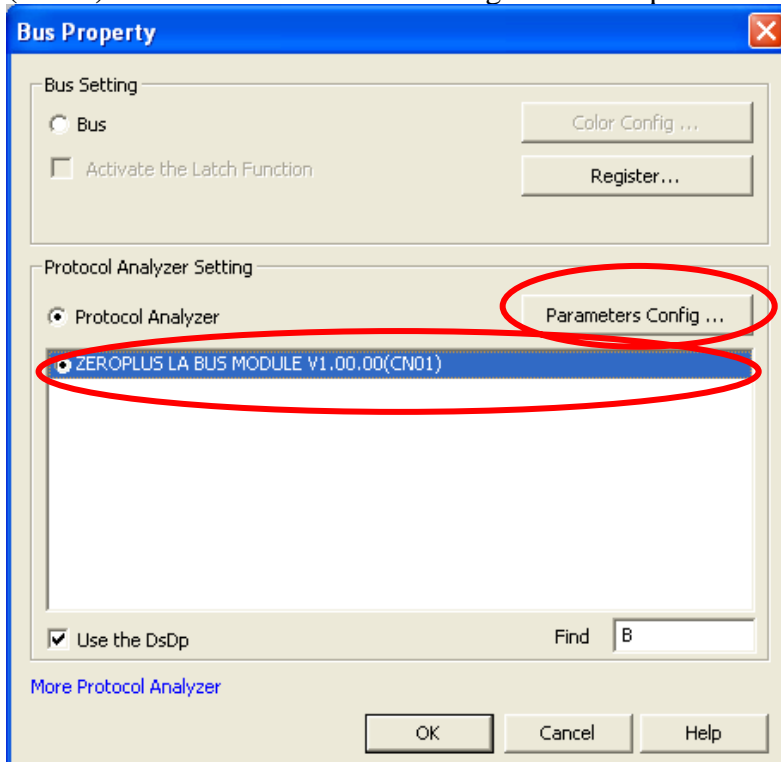

STEP 2. Select **Bus 1**, then press **Right Key** on the mouse to list the menu, then press **Bus Property** or **Bus** icon on the toolbar to open **Bus Property** dialog box.

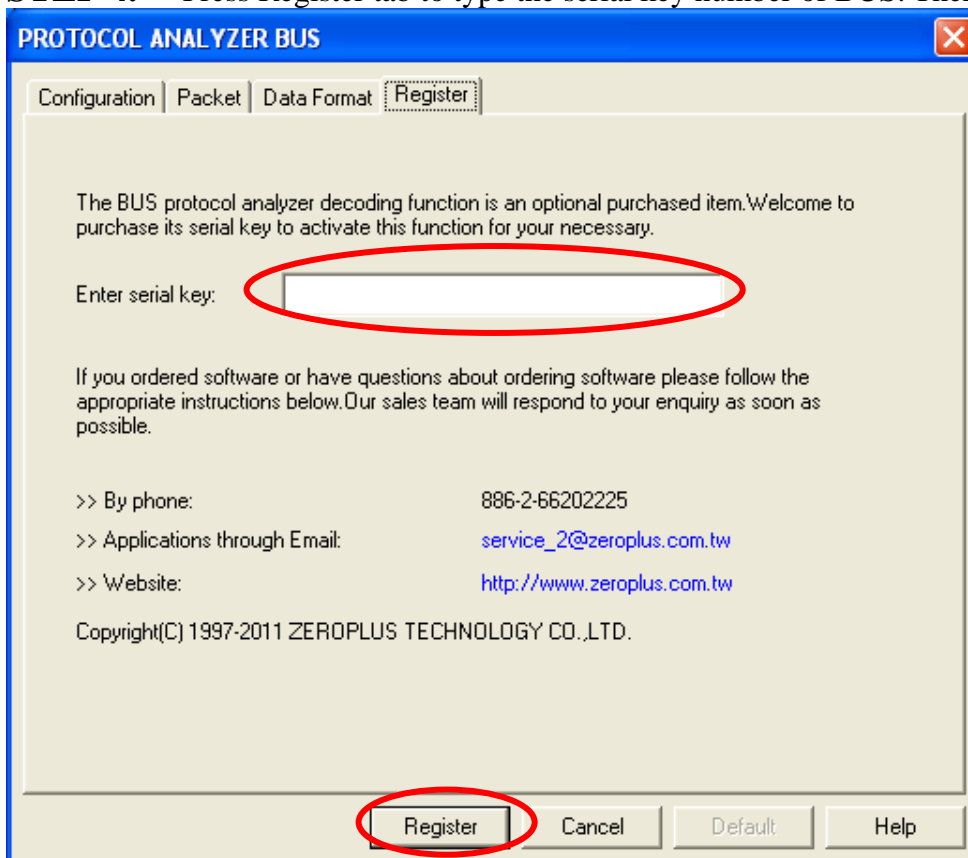

STEP 3. Select the Protocol Analyzer, and then choose **ZEROPLUS LA BUS MODULE V1.00.00 (CN01)**. Next click Parameters Configuration to open Protocol Analyzer Bus dialog box.

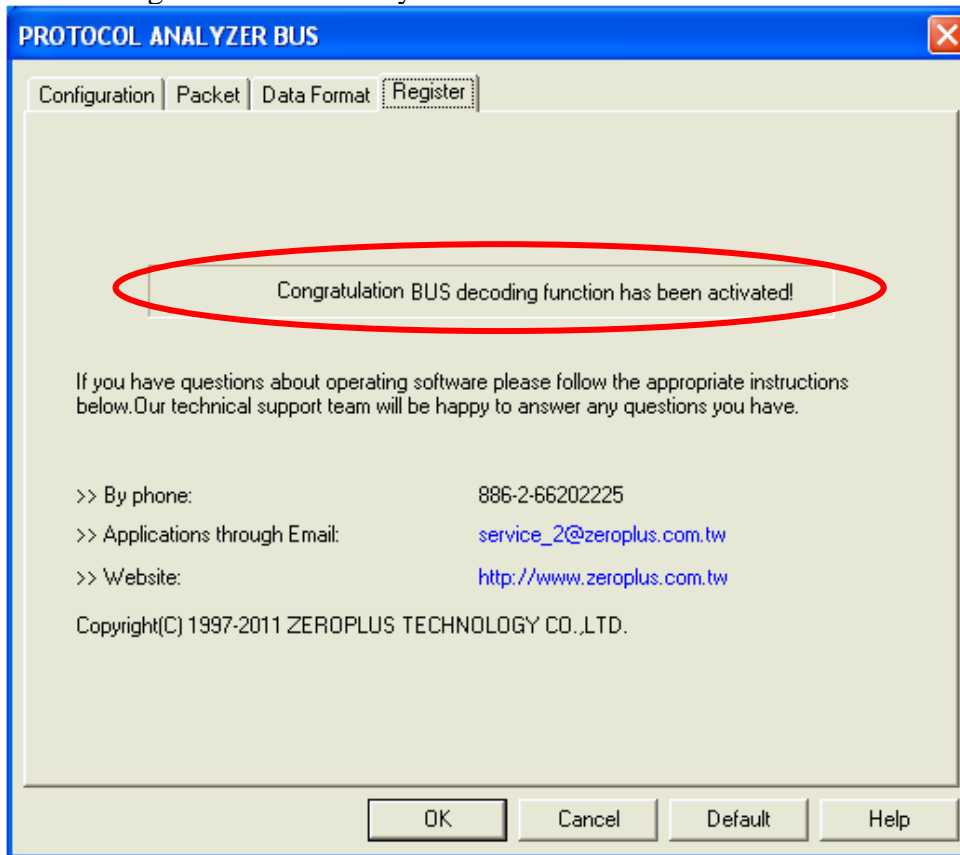

STEP 4. Press Register tab to type the serial key number of BUS. Then press Register.

STEP 5. After pressing the Register button, following dialog box will appear, it denotes that the BUS has been registered successfully.

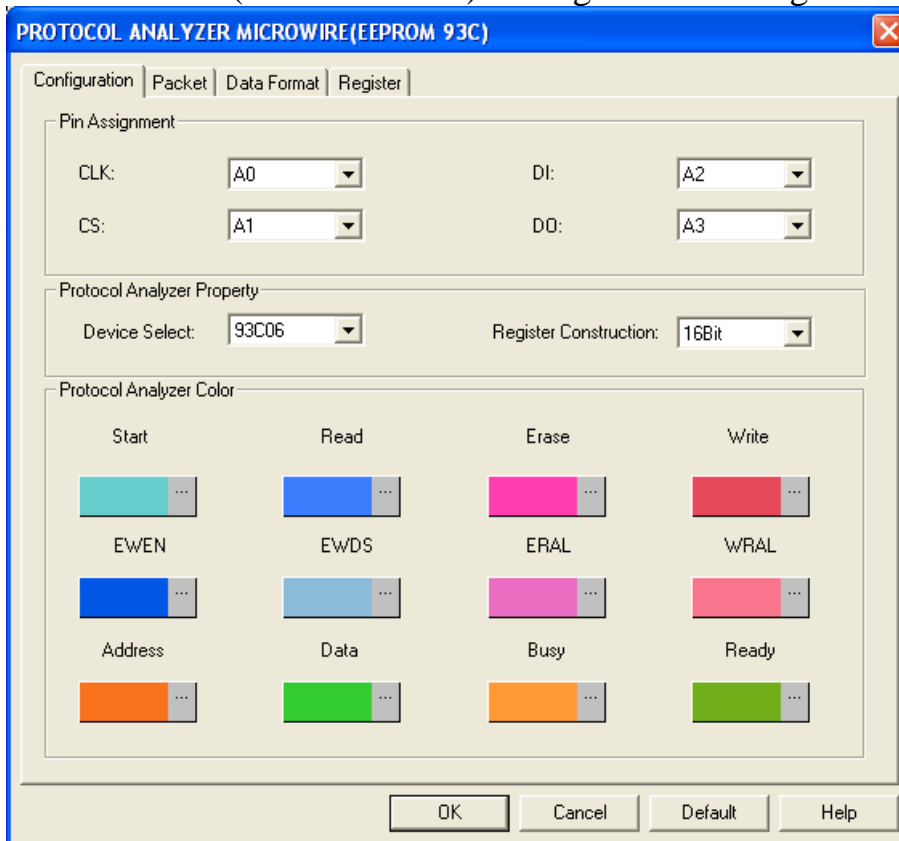

2 User Interface

In the configuration, please refer to below images to select options of setting **MICROWIRE (EEPROM 93C)** module.

MICROWIRE (EEPROM 93C) Configuration Dialog Box

Pin Assignment:

CLK: It is the Clock channel of the Protocol Analyzer.

CS: It is the Device Chip Select channel, and it is available for the High Level.

DI: It is the Command, Address and Data Input channel.

DO: It is the Data Output channel.

Protocol Analyzer Property:

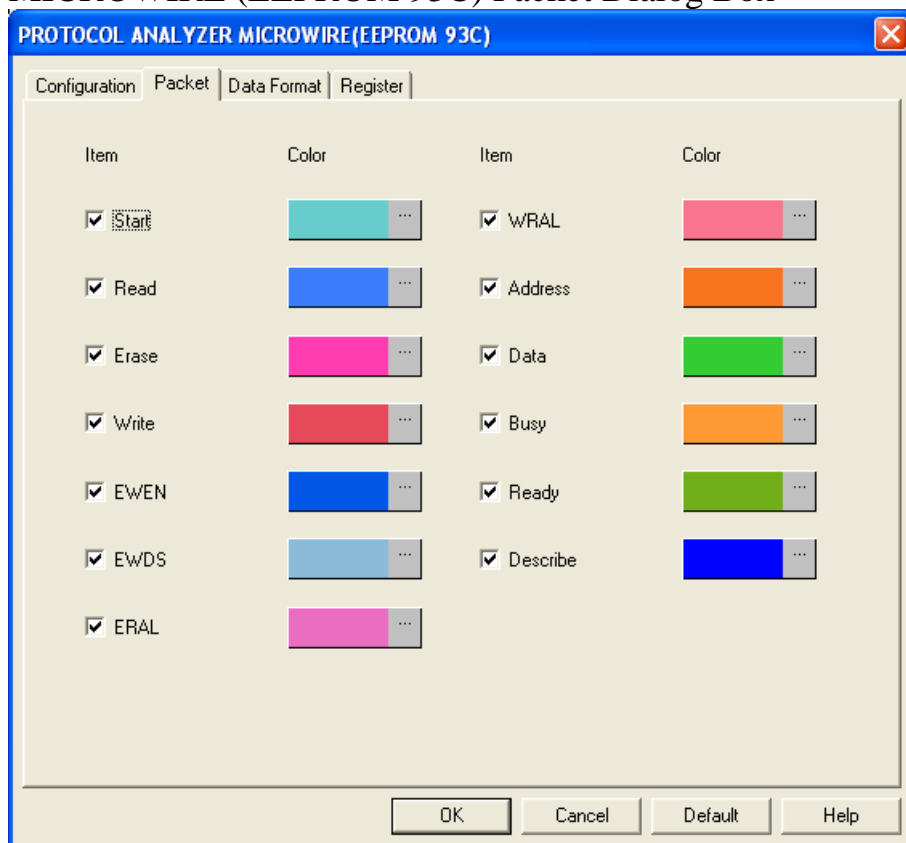

Device Select: There are seven kinds of devices to be selected from the pull-down menu which are 93C06, 93C46, 93C56, 93C57, 93C66, 93C76 and 93C86. The default device is 93C06.

Register Construction: There are two modes for the Register Construction which are 8Bit and 16Bit. The default mode is 16Bit.

Protocol Analyzer Color: The Protocol Analyzer Color can be varied by users.

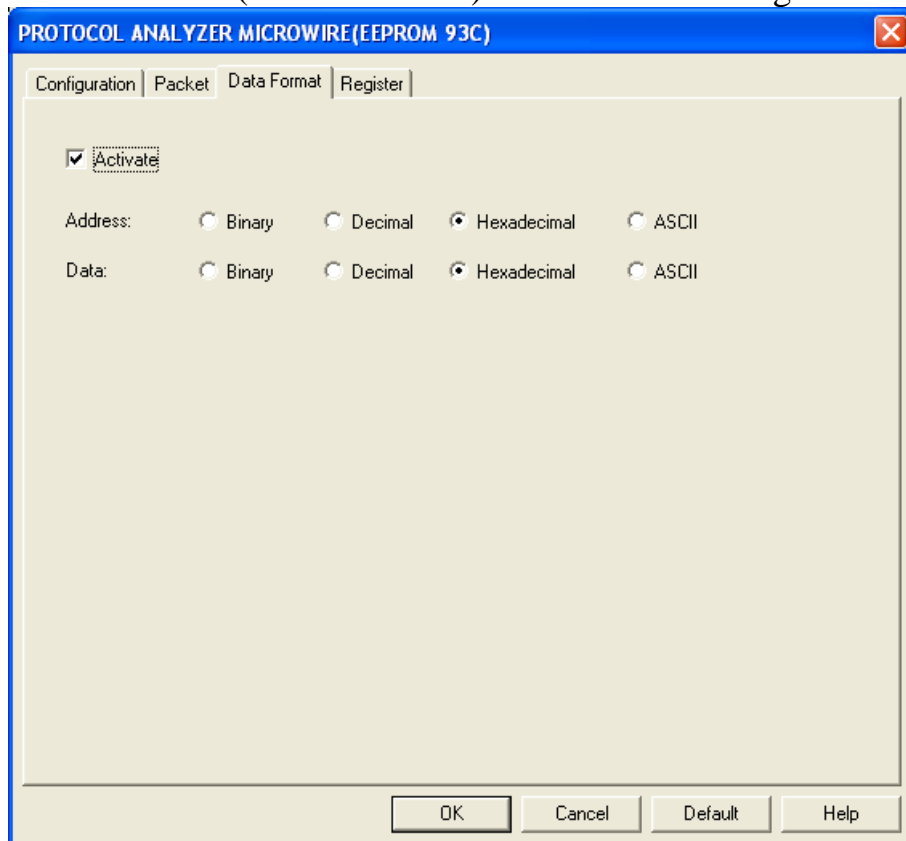

MICROWIRE (EEPROM 93C) Packet Dialog Box

In the Packet dialog box, users can set the items to be displayed and the color of items.

MICROWIRE (EEPROM 93C) Data Format Dialog Box

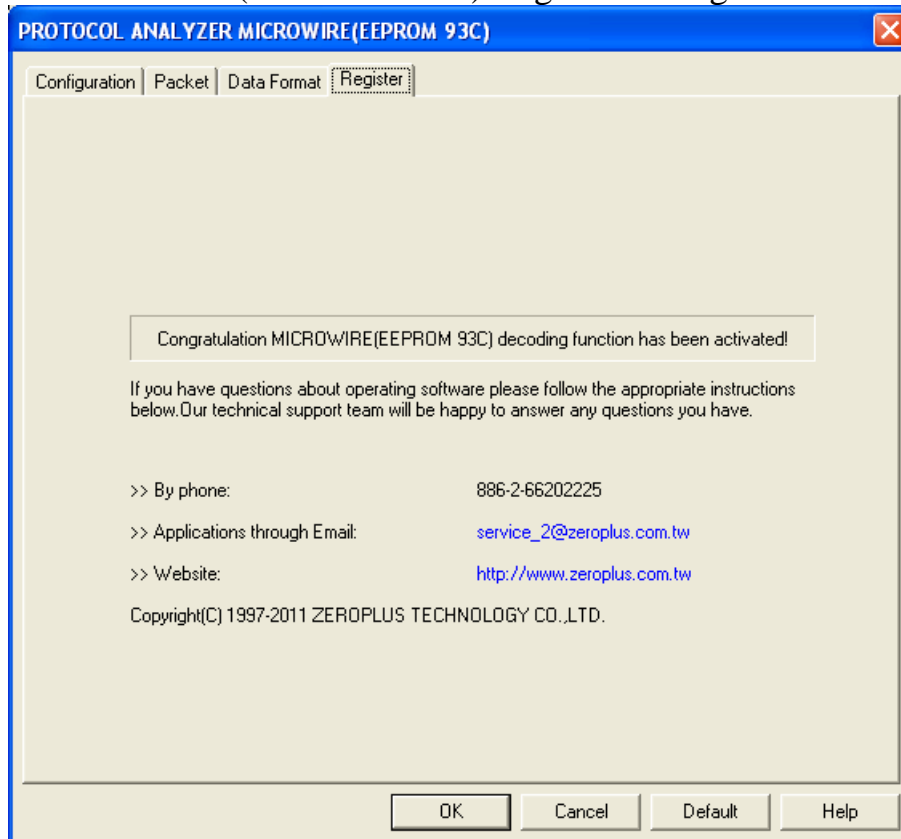

Users can set the Data Format of the Address and Data as their requirements. When selecting the option,

Activate, the data formats are decided by the settings in the Protocol Analyzer; when not selecting the option, Activate, the data formats are decided by the settings in the main program.

MICROWIRE (EEPROM 93C) Register Dialog Box

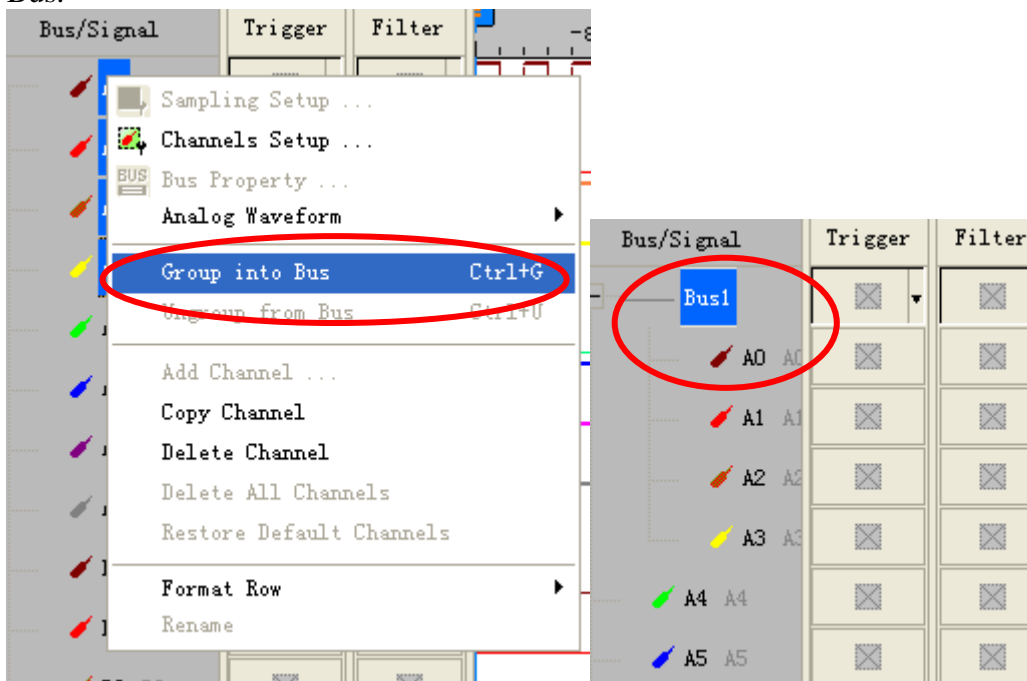

There is ZeroPlus company information. If you have any questions about software operations, you can contact ZeroPlus by Telephone or Email.

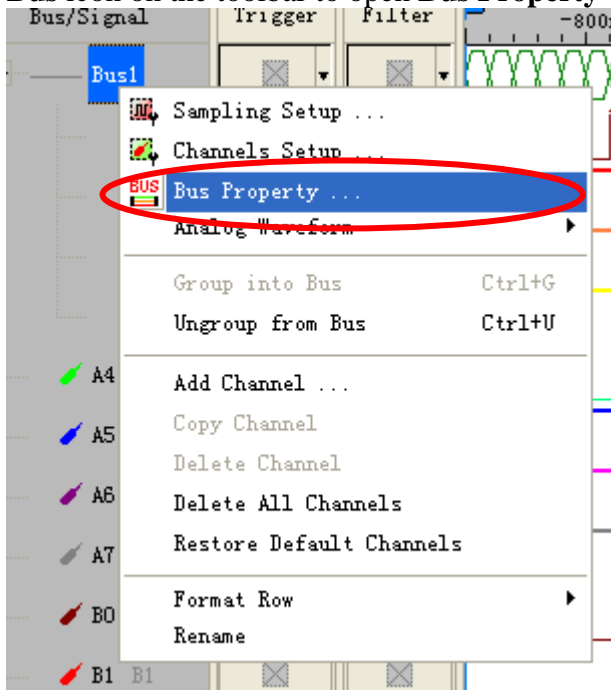

3 Operating Instructions

STEP 1. Group A0-A3 into **Bus1** by pressing the **Right Key** on the mouse. MICROWIRE (EEPROM 93C) needs four channels to decode signals at least, so it is necessary to group four or more channels into a Bus.

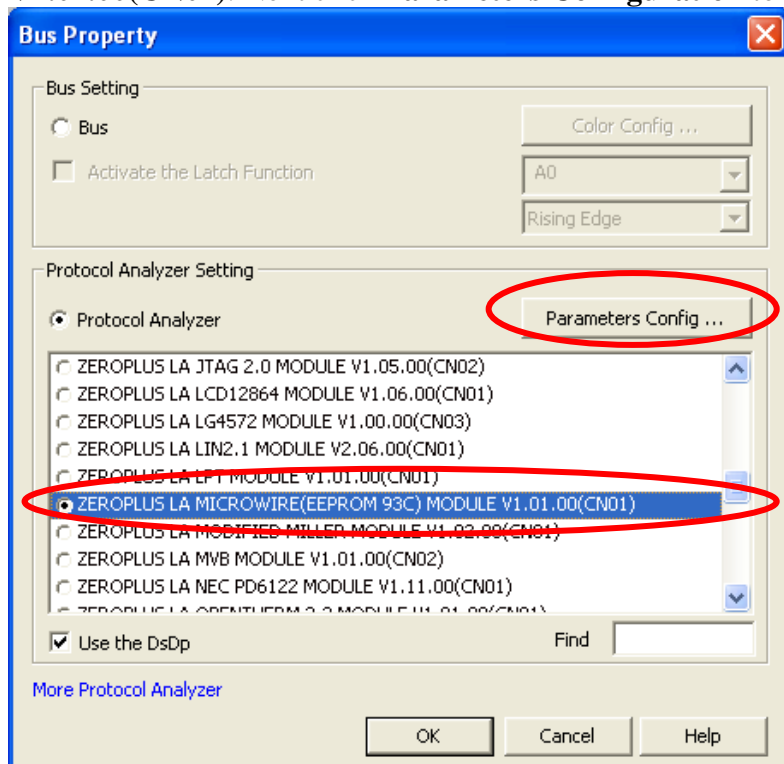

STEP 2. Select **Bus1**, and press **Right Key** on the mouse to list the menu, then press **Bus Property** or **Bus** icon on the toolbar to open **Bus Property** dialog box.

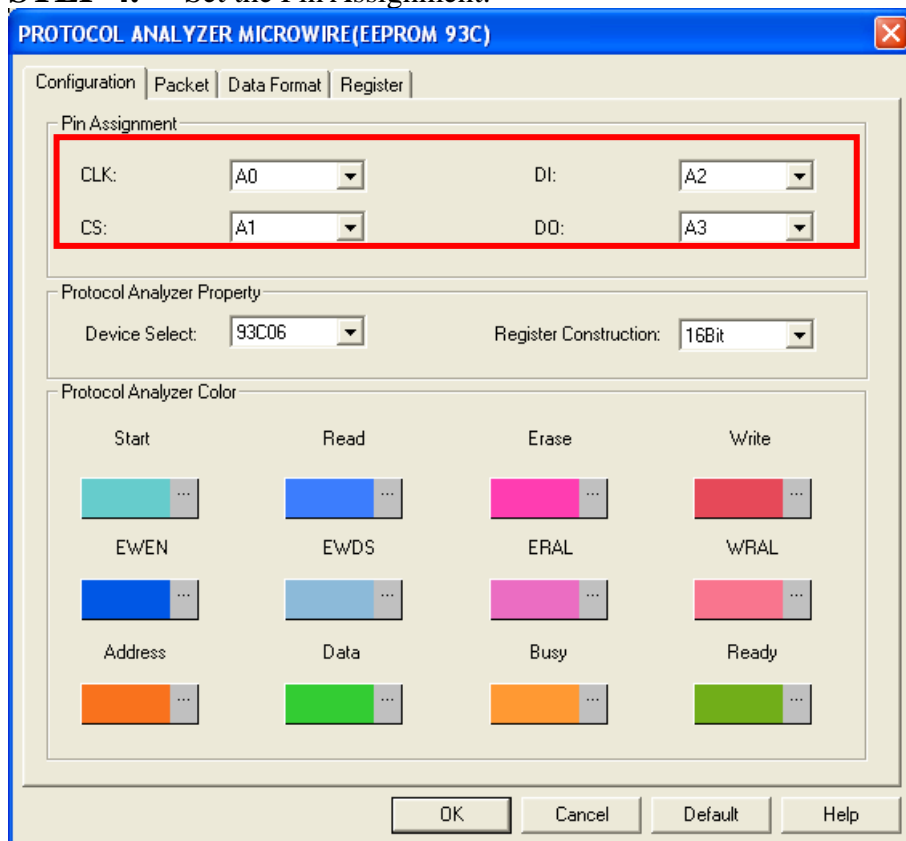

STEP 3. For Protocol Analyzer MICROWIRE (EEPROM 93C) Parameters Configuration, select Protocol Analyzer, and then choose **ZEROPLUS LA MICROWIRE (EEPROM 93C) MODULE V1.01.00(CN01)**. Next click **Parameters Configuration** to open the **Configuration** dialog box.

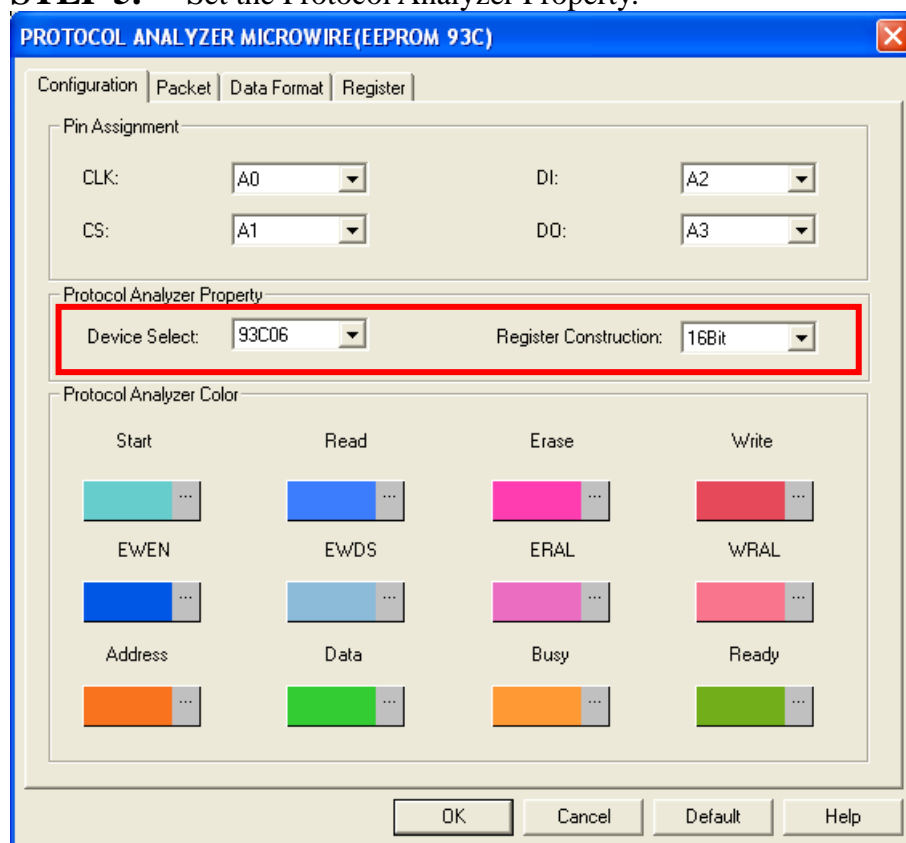

STEP 4. Set the Pin Assignment.

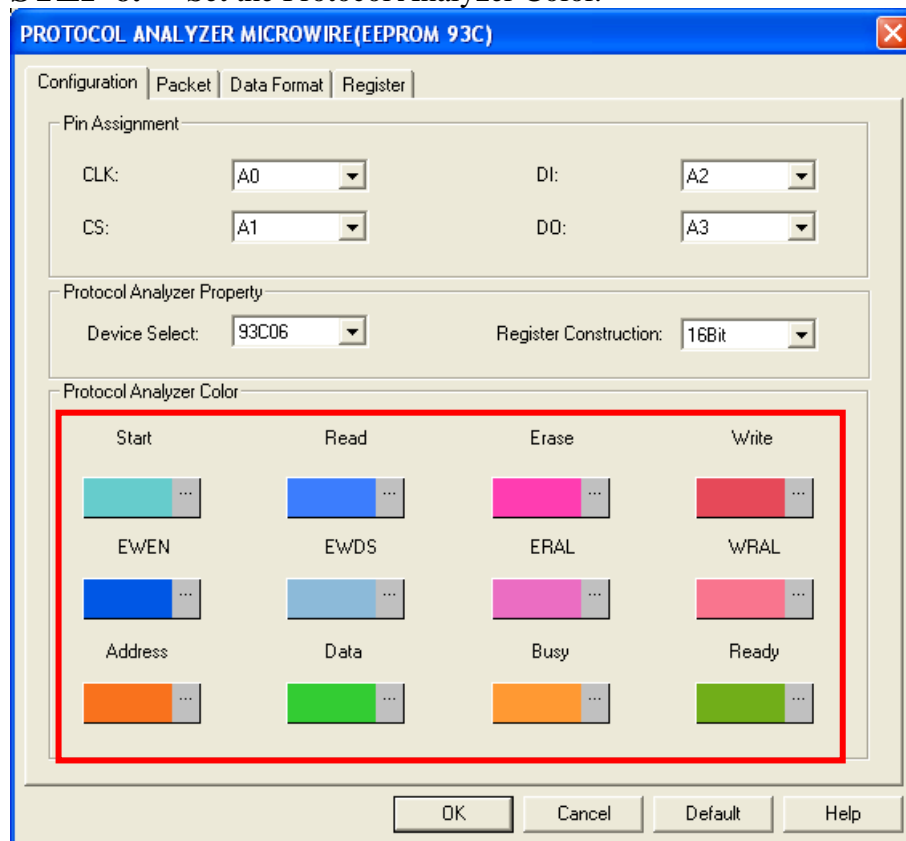

STEP 5. Set the Protocol Analyzer Property.

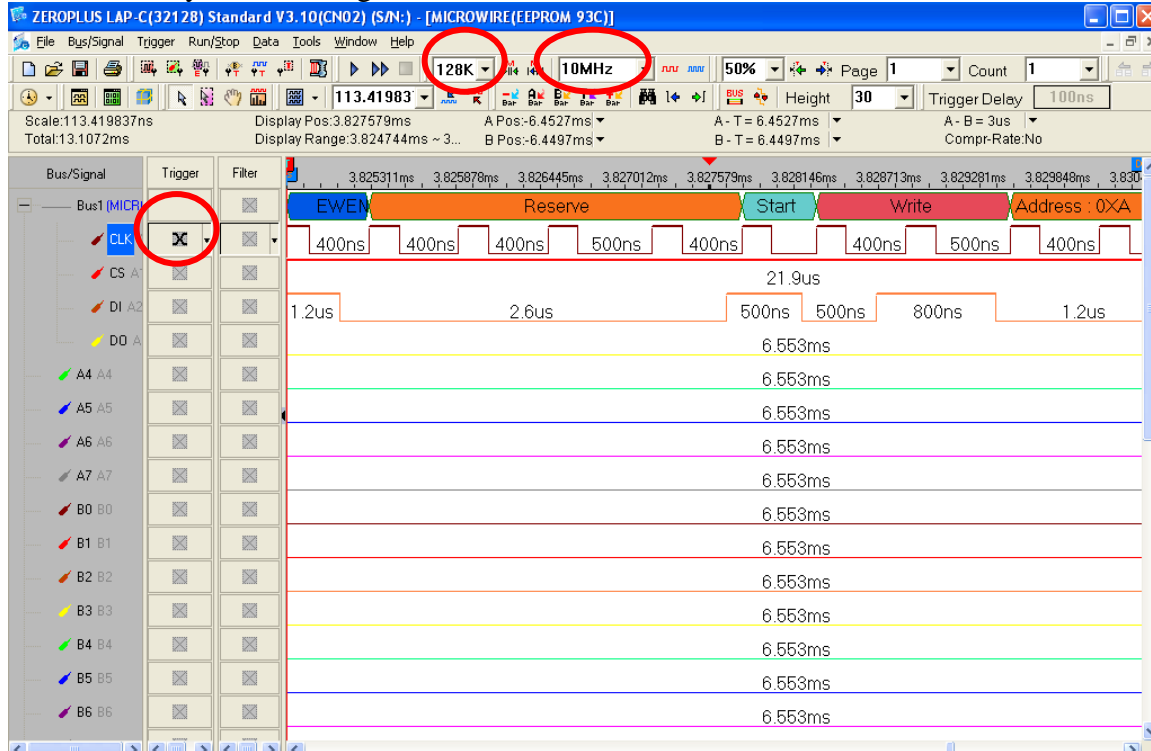

STEP 6. Set the Protocol Analyzer Color.

STEP 7. Following pictures show the completion of the protocol analyzer decoding and packet list. The trigger condition is set as Either Edge; the memory depth is 128K; the sampling frequency is 10MHz (the sampling frequency should be more than 4 times higher than the signal to be tested).

Protocol Analyzer Decoding
